

The use of MARS at Bureau of Meteorology

Tan Le, Bill Bourke
Bureau of Meteorology Research Centre
Data Assimilation Group

Agenda

- BoM IT infrastructure
- Data management requirements
- MARS

IT infrastructure

- NEC SX6 supercomputer
- HP/IBM mid-range servers
- SAN
- STK SILO (2x5000 cartridges)

HPCCC SX-6

- **28 Nodes (23 for BoM) - 224 processors**
- **112 GBps Bisection Bandwidth**
- **22 TB User Capacity on SX-GFS**
 - Hosted by 2 x NEC TX7/16 Servers
- **6 TB Systems Disks Local to Nodes**

BoM Modelling

(Current Operational and Quasi-Operational Systems)

- Short Range
 - TXLAPS PT375L19 Regional 3 day prediction system
 - LAPS PT375L19 Australian Region 3 day prediction system
 - LAPS PT125L19 Australian Region 2 day prediction system
 - MESOLAPS PT05 2 day prediction system
 - Melbourne-Tasmania, Sydney, SE Queensland, Adelaide, Perth
 - TCLAPS PT15 Tropical Cyclone 2 day prediction system
 - AAQFS Australian Air Quality Forecast System
 - Melbourne and Sydney
- Medium Range
 - GASP T239L29 Global 10 day prediction system
 - GASP 33 member T119L19 Ensemble Prediction System

BoM Modelling (2)

(Current Operational and Quasi-Operational Systems)

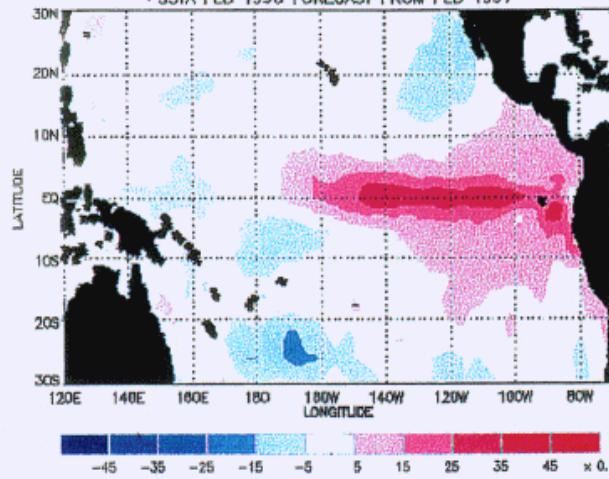

- Seasonal
 - POAMA (Predictive Ocean Atmosphere Model for Australia)
 - coupled atmosphere-ocean 9 month forecast system
 - T47L17 BMRC atmospheric model
 - ACOM-2 (Australian Community Ocean Model 2)
- Decadal and Climate Change
 - AMIP2 (Atmospheric Model Intercomparison Project)
 - CMIP (Climate Model Intercomparison Project)
 - CFMIP (Cloud Feedback Intercomparison Project)
 - C20C (Climate 20th Century International Project)

BoM Modelling (3)

(Current Operational and Quasi-Operational Systems)

- Emergency Response Systems
 - RA V Regional Specialised Meteorological Centre (RSMC)
 - HYSPLIT Version 4 Base
 - Roland Draxler at NOAA's Air Resources Laboratory (Draxler 1997)
 - Contribution from BMRC (Draxler and Hess 1997, 1998).
- WAM - Wave Ocean Model

SSTA FEB 1998 FORECAST FROM FEB 1997

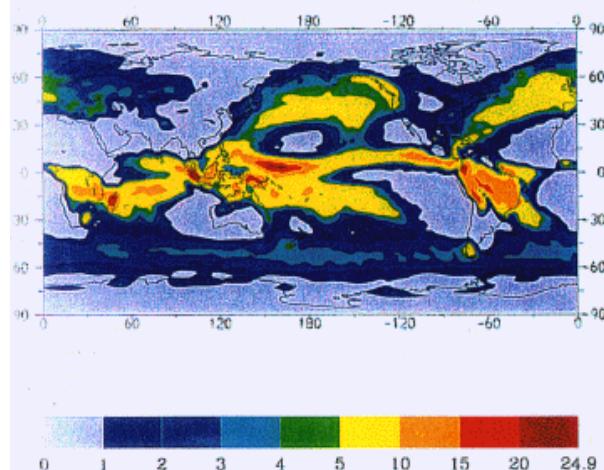

seasonal forecasting
(coupled)

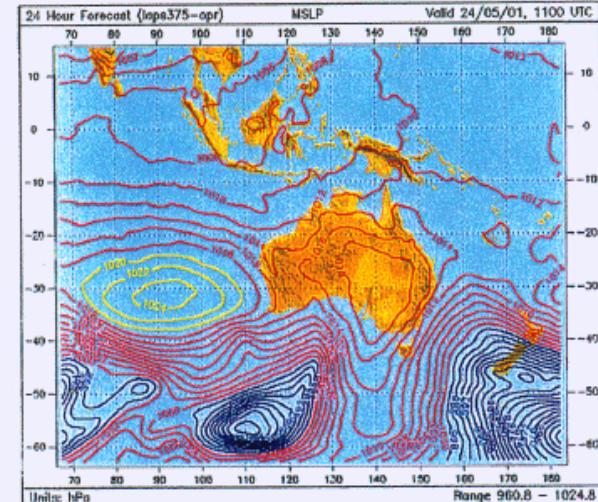

BMRC Atmospheric Model

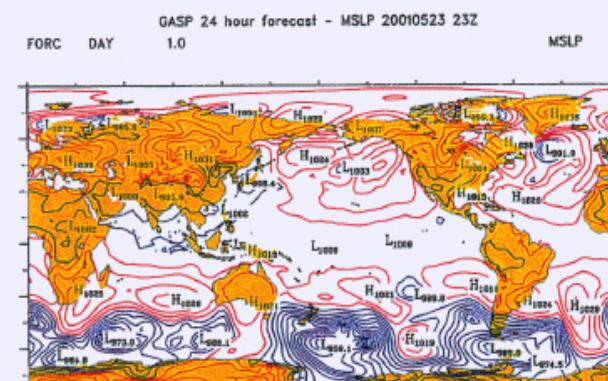

PREC: AMIP1(1979-1988) JAN

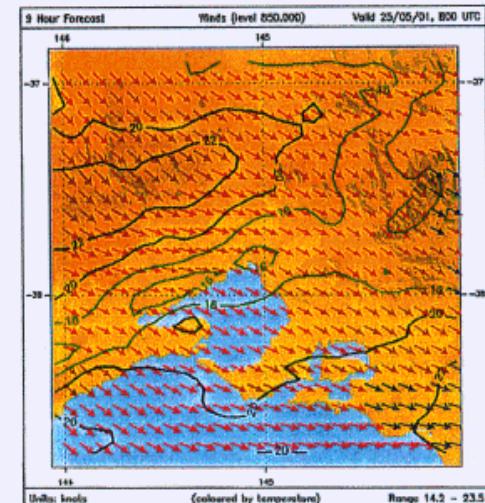

climate and climate change
(coupled)

regional forecasting

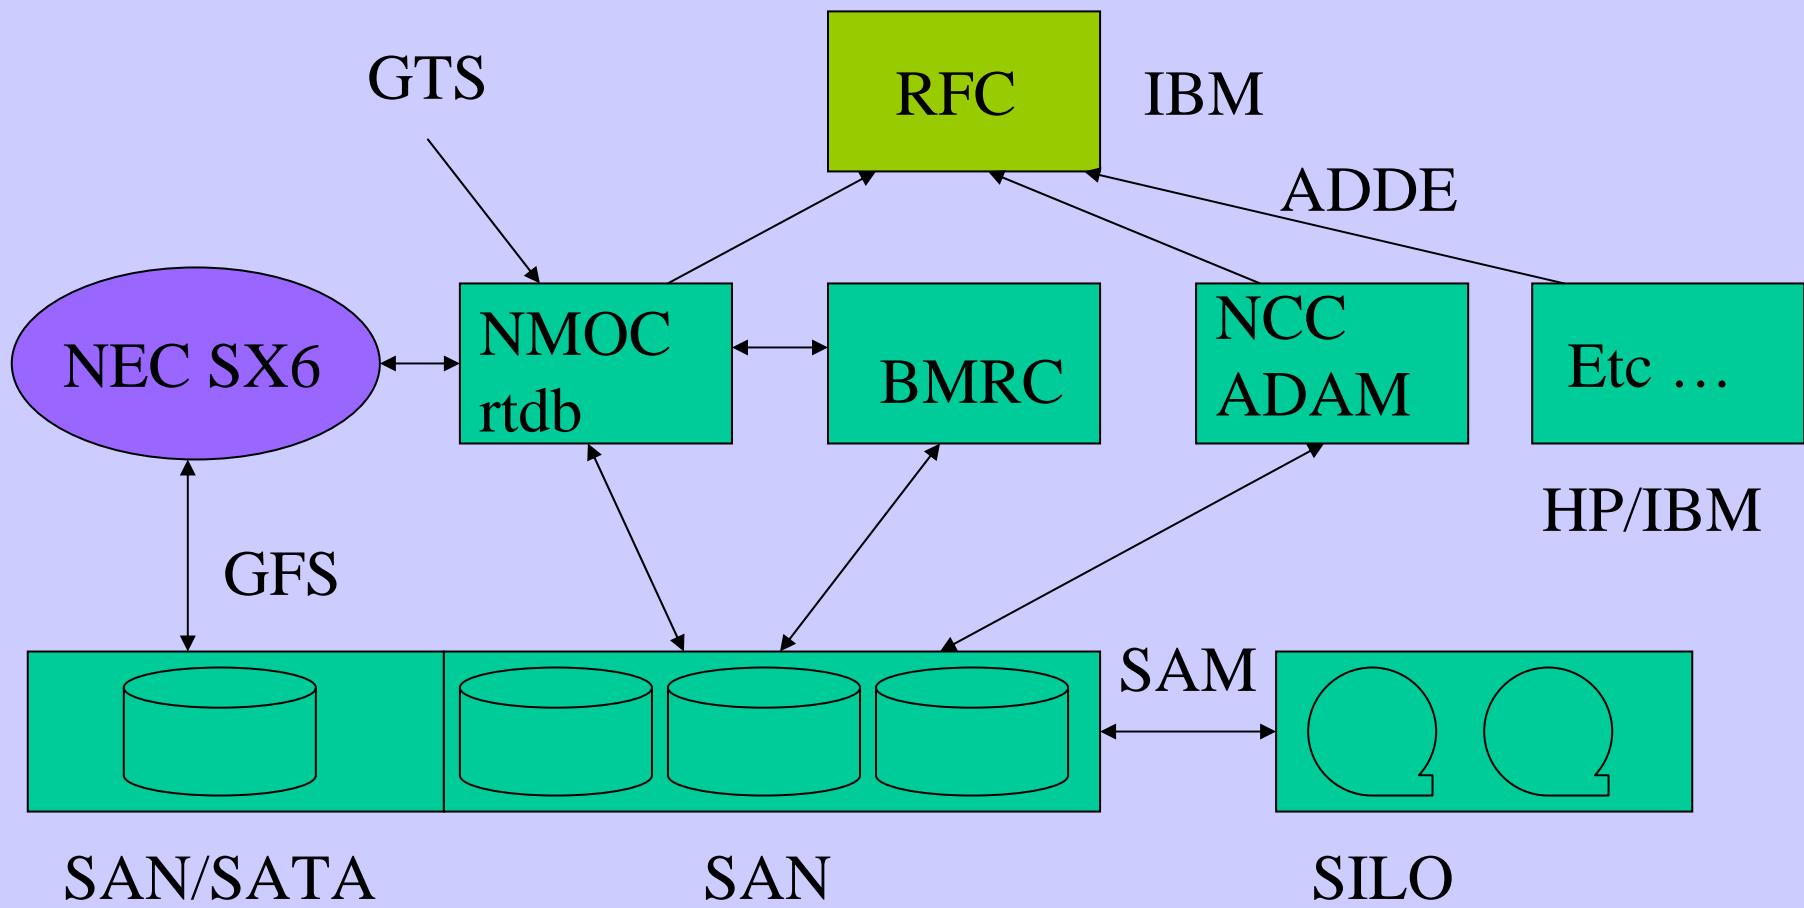

medium range forecasting

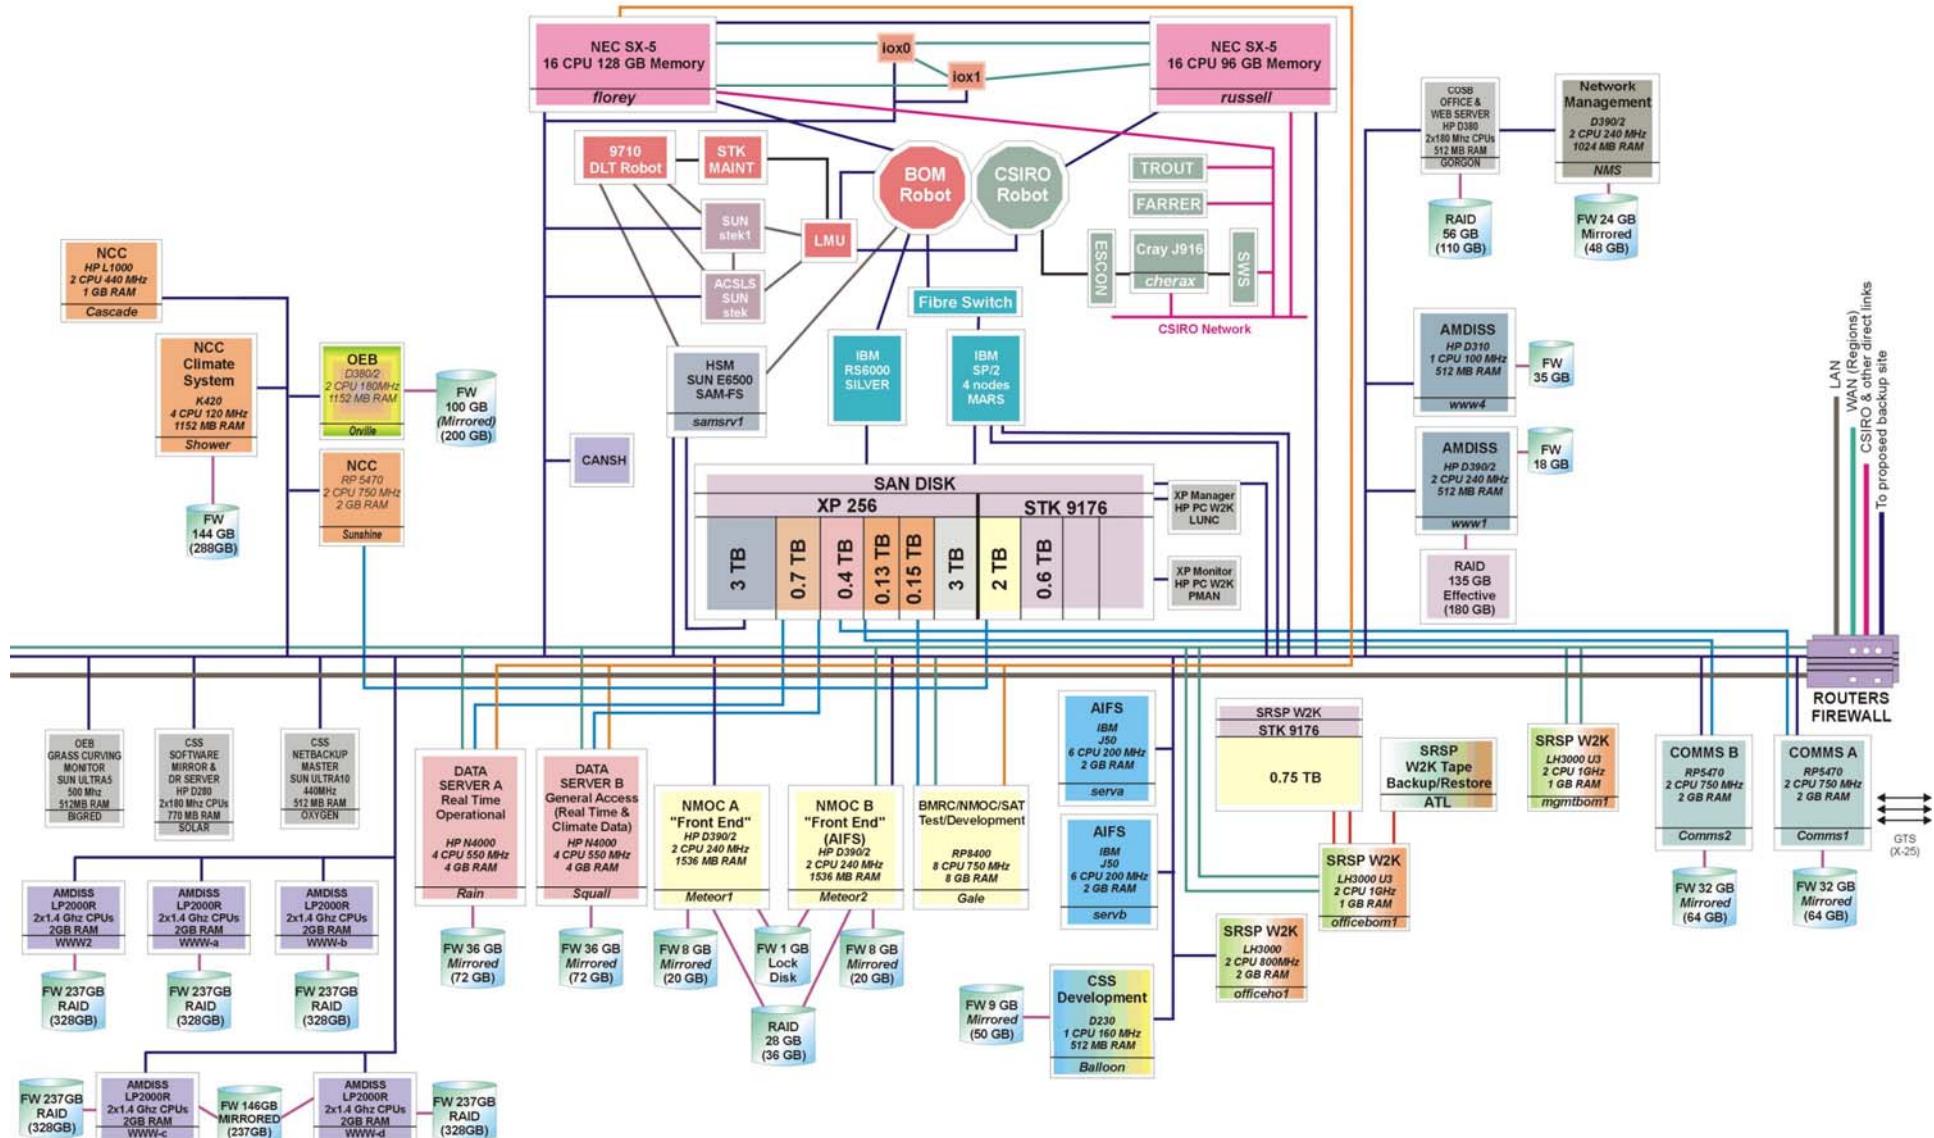

mesoscale forecasting

IT infrastructure

CURRENT CCF SCHEMATIC (CRITICAL SYSTEMS)

OCTOBER 2002 - 150 Lonsdale Street

IT infrastructure

- Independent data management in key divisions
- NMOC: ORACLE/rtdb
- BMRC: SamFS/STK SILO
- NCC: ORACLE/ADAM
- RFCs: rtdb/ADDE
- Etc

Data Management issues

- BMRC perspective
- Rtdb 10-day archiving window not suitable for research and RFC case study
- SamFS not suitable for operational applications
- Desirable to have common data management system for both NMOC and BMRC
- Extending to other Bureau divisions

Data Management requirements

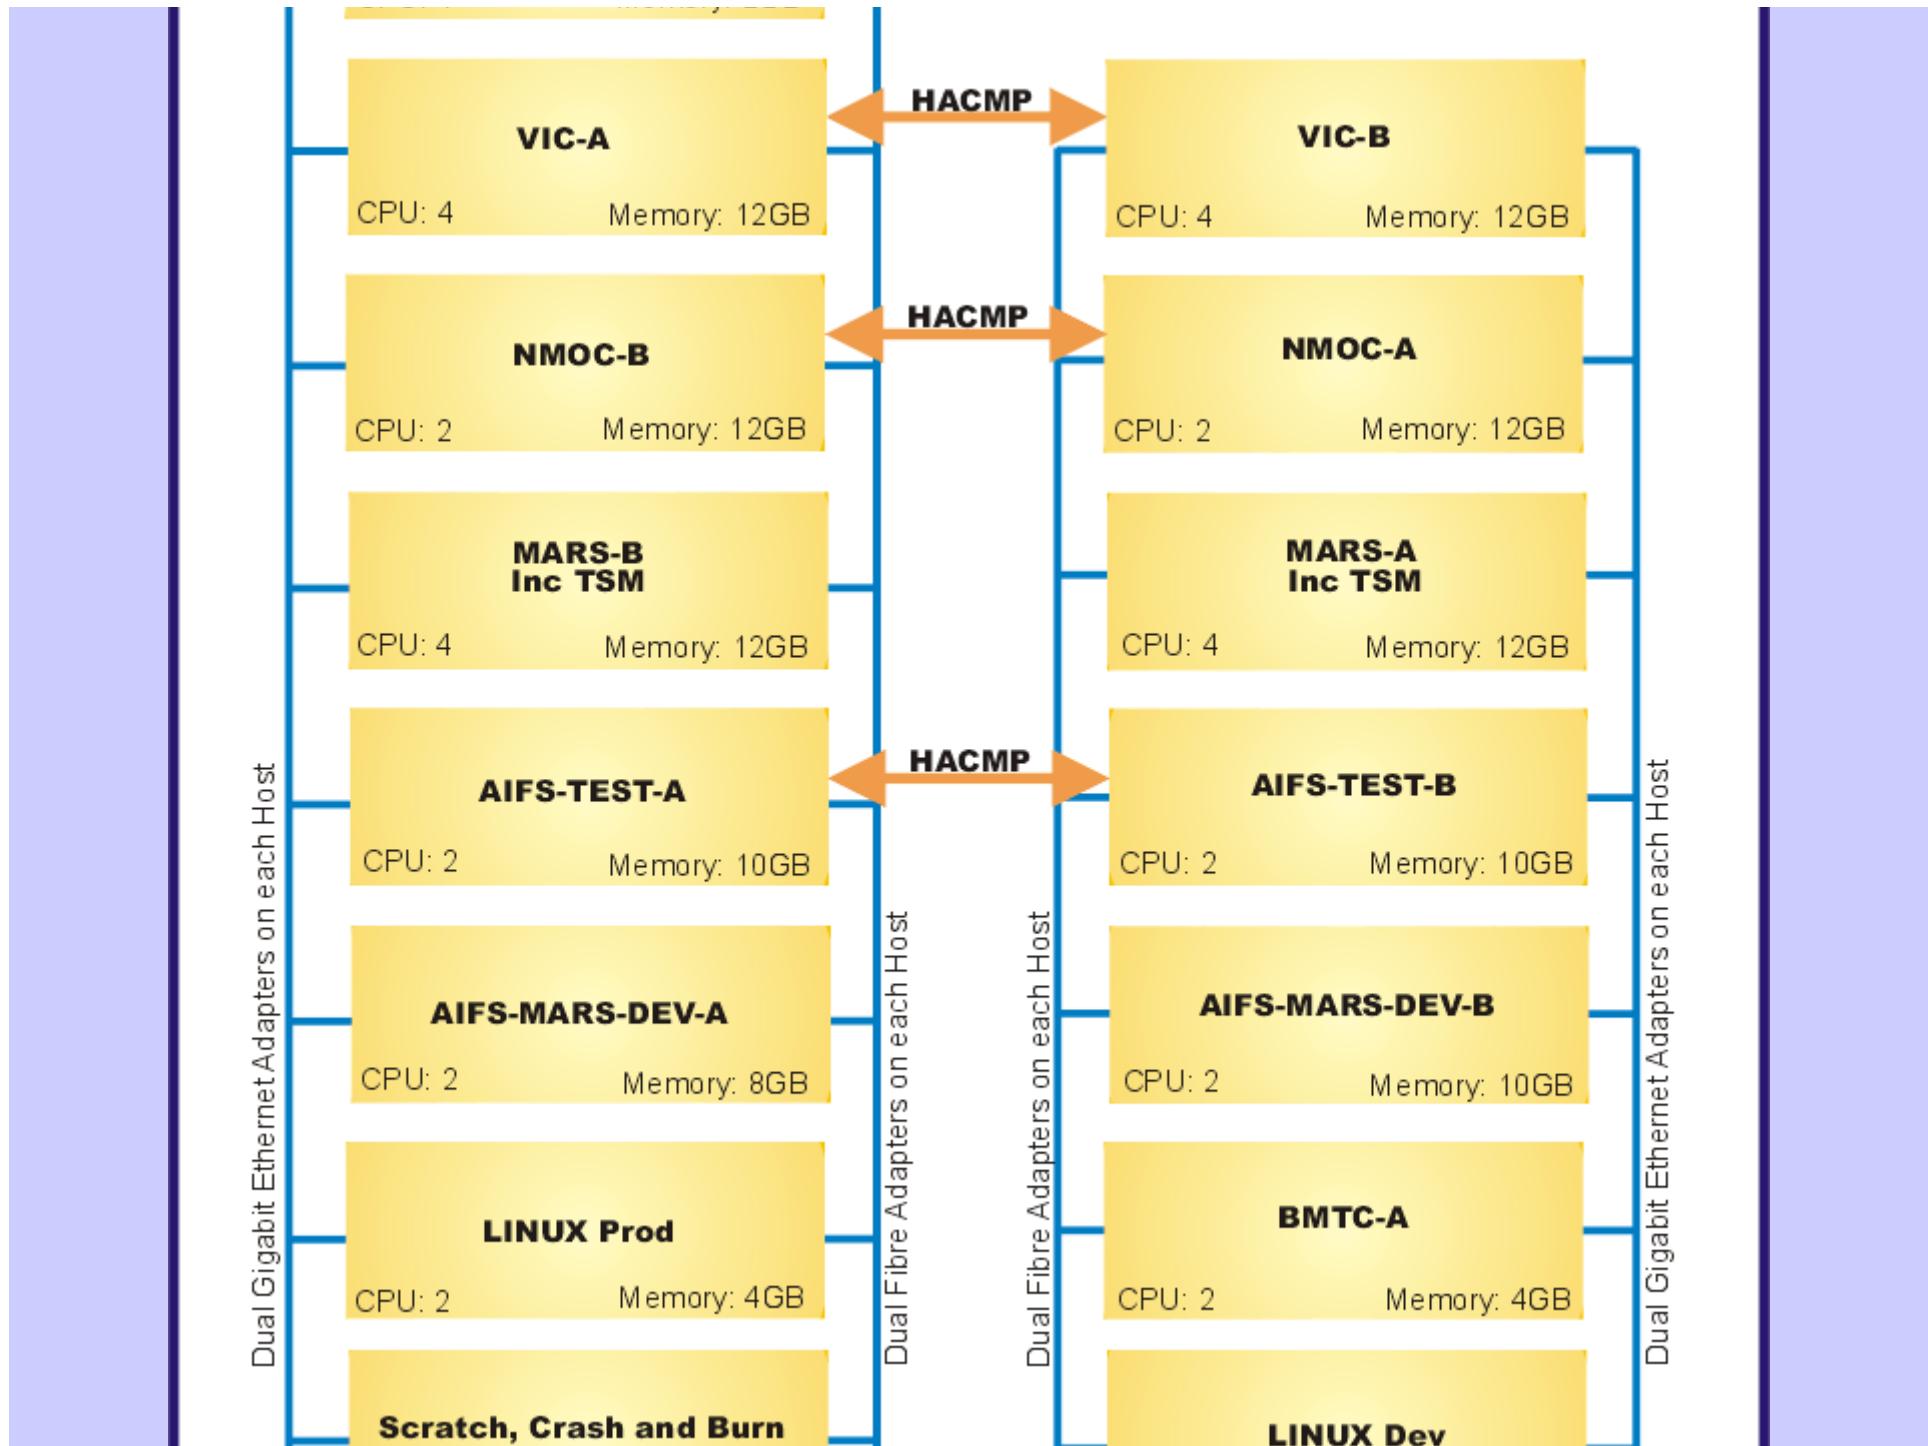

- Seamless access of all data to all users
- Common method in data access
- Minimise data duplication
- Improve data distribution and presentation
- Ensemble products

MARS at the Bureau - features

- Location independence
- Data independence
- Seamless, content-based data access
- Multi client/server configuration
- Data subset

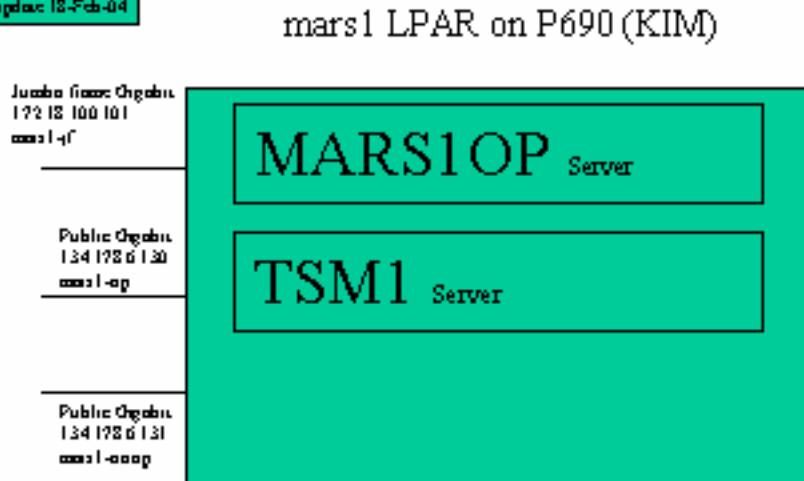

MARS at the Bureau - history

- 1997: agreement reached with ECMWF to provide MARS software to the Bureau
- 1998: prototyping on RS6000
- 2000-2004: full implementation on SP2
- 2004-: semi-operational on P690

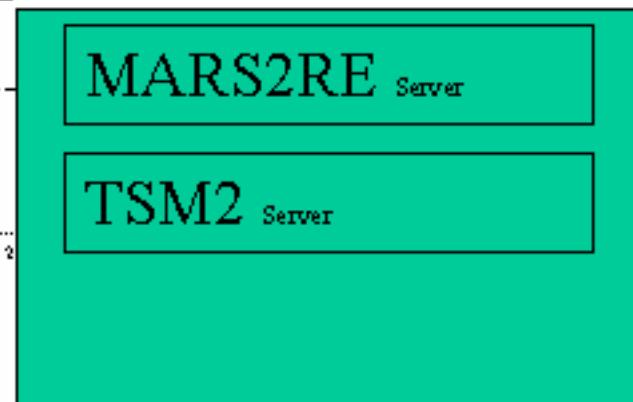

Last update 18-Feb-04

mars1 LPAR on P690 (KIM)

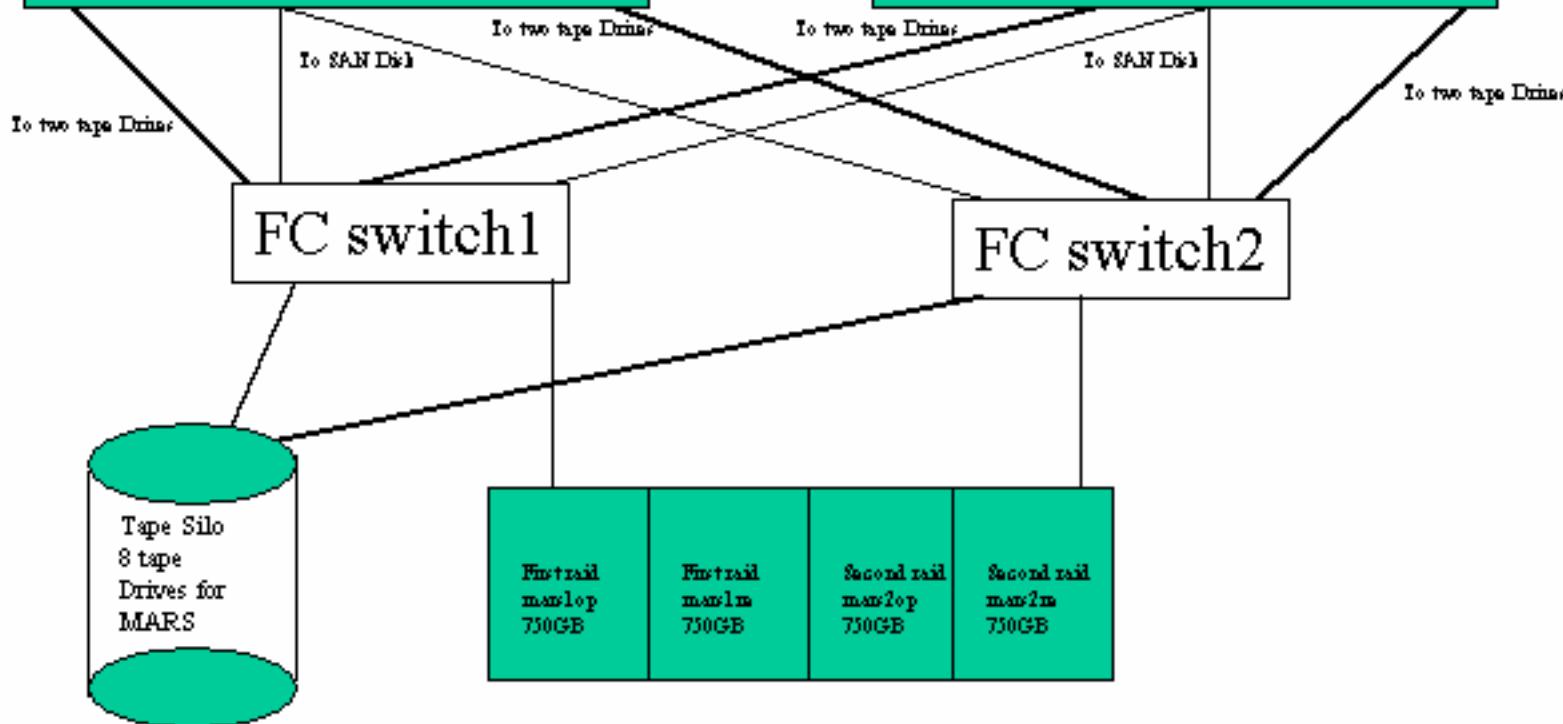

mars2 LPAR on P690 (KATH)

Jumbo floors: Chigabu
172 18 100 102
max=2-qf

Public Chigabu
134 172 6 132
max=2-ag

Public Chigabu
134 172 6 132
max=2-agp

MARS strategies at the Bureau

- Minimal changes
 - Configurations
 - GRIB/BUFR definitions for local data
- Clients on key Bureau systems
- Utility programs
 - Data format conversion
 - Interface to local software systems
 - Support for research archive

MARS at BoM – utility programs

- Data format conversion
 - NetCDF $\leftarrow \Rightarrow$ GRIB
 - Box/HDF $\leftarrow \Rightarrow$ BUFR
- Local tables
 - GRIB Ids
 - BUFR subtypes
- Research experiment DB

008g

008g jzp

Wed Aug 24 14:41:41 2005

=====

Wed Aug 24 14:47:44 2005

=====

008g - experiment L33check

The same as L33e6fixml (007b) but with

NEWSIG_TYP = 'replic' ! replicate model levels

NEWSIG_NPBL = 8 ! number of levels to replicate

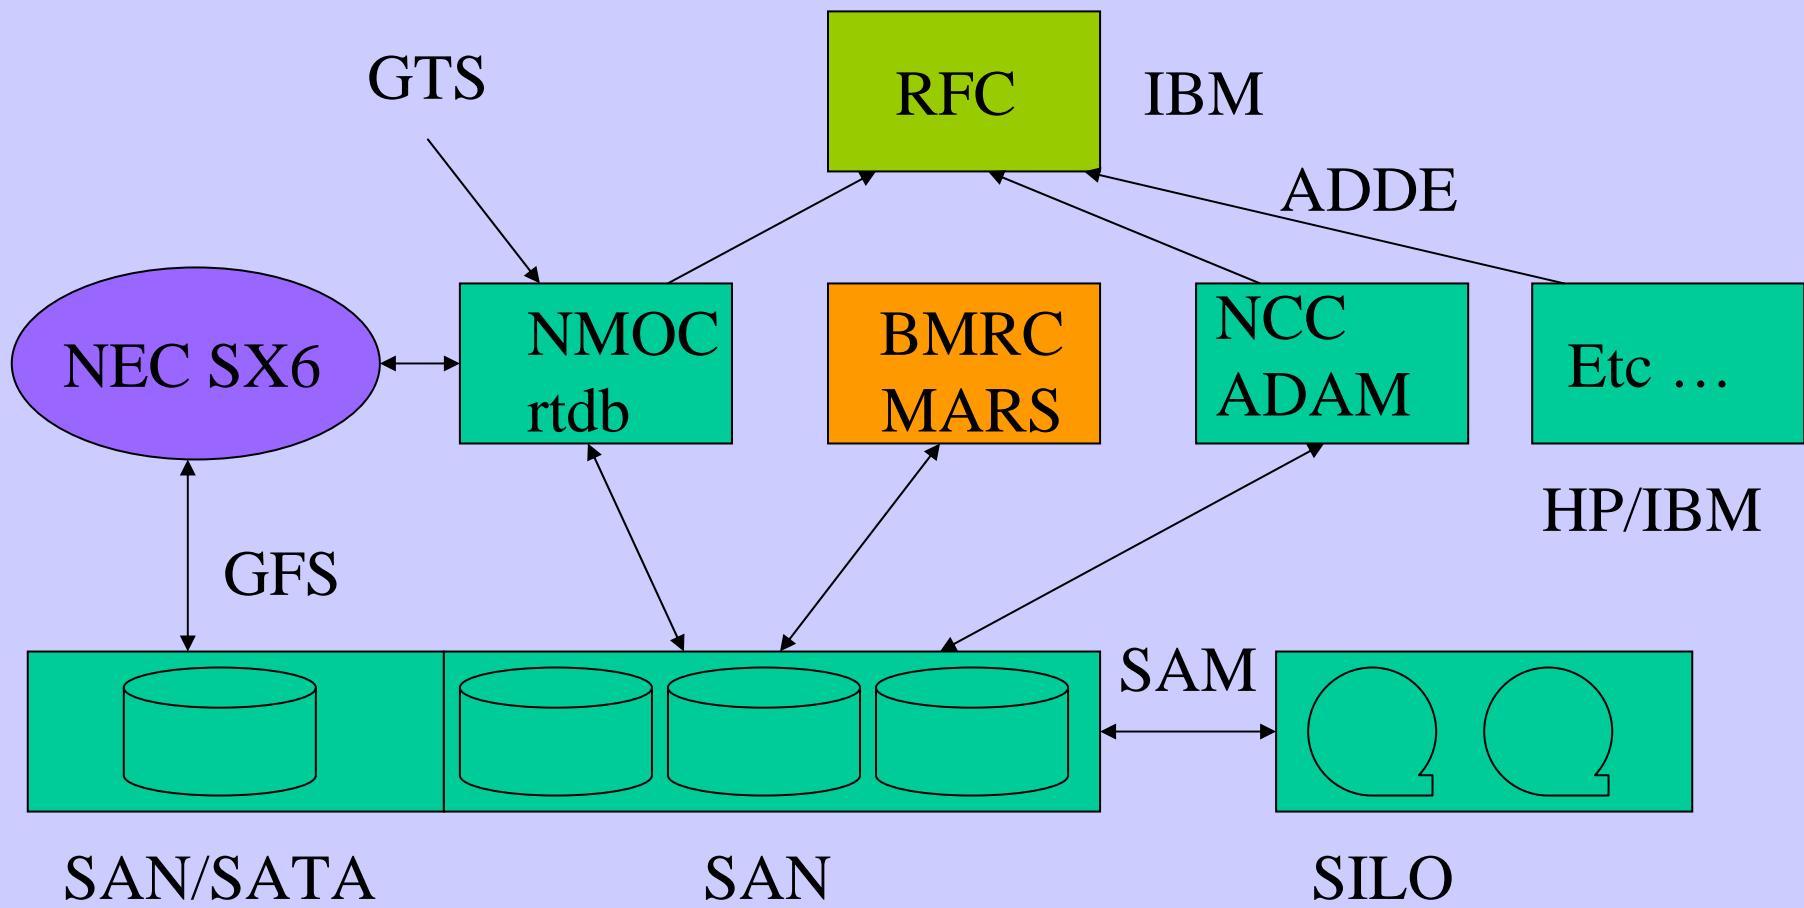

NEWSIG_ZS = 200 ! only do if model levels > 1

This is an attempt to fix crashes due to crazy extra
strong inversions over antarctic.

MARS at the Bureau - data

- NWP models (raw + post-processed)
 - GASP/LAPS (+ ensembles)
 - MesoLAPS
 - Overseas models
 - Research
- Oceanographic
- Observations
- ERA40/TOGA

MARS at the Bureau

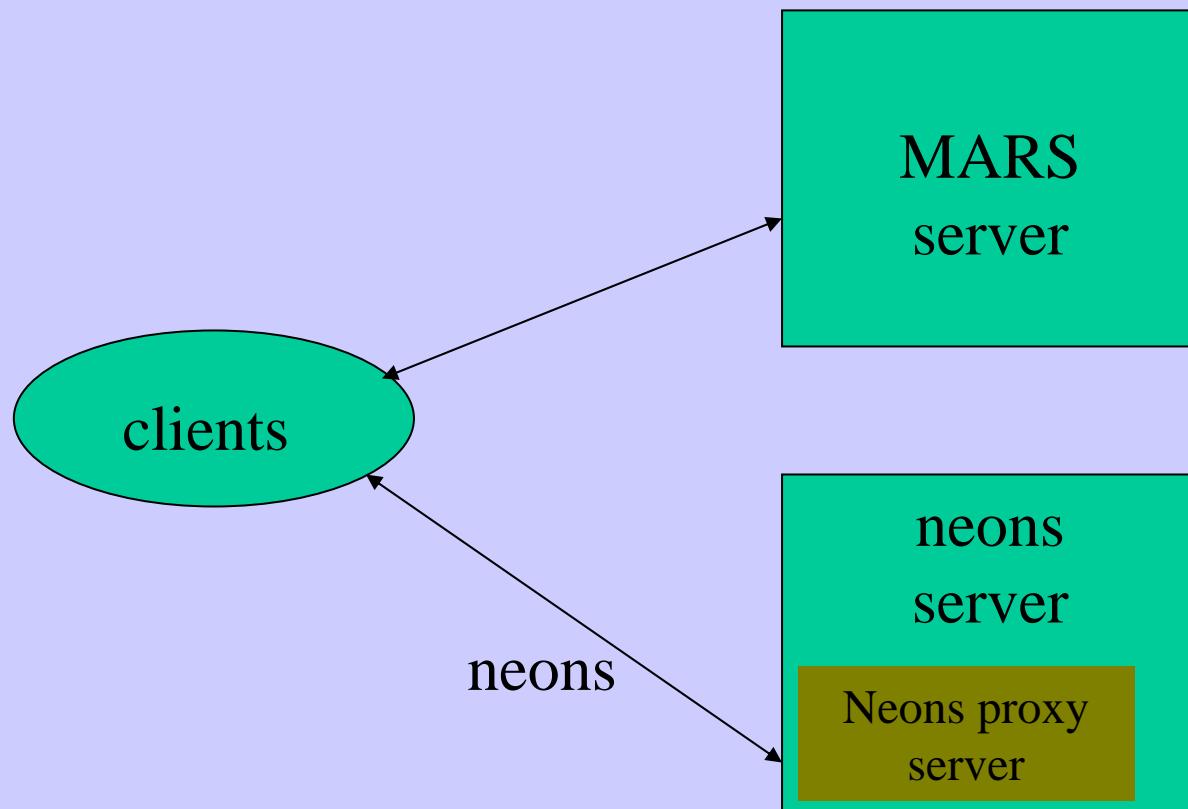

MARS at the Bureau

- One more data archive
- Mixture of data in SamFS and rtdb
- Seamless access
- Interactive/batch/web access
- Integration into other Bureau's systems
- Framework for unified data access

Neons/rtdb interface - NMOC

- Neons/ORACLE proxy server
- Utilising generic open/read/write/close methods in MARS client software
- Additional keywords/values
- Handles both gridded and obs data
- Neons gridded data $\leftarrow\Rightarrow$ GRIB

Neons/rtdb interface

Neons/rtdb interface

Retrieve,

Database = `neons`,

Stream = `GASP`,

`Dbgeom` = `global_181x360`,

...

Param = `T`,

`Levtype` = `HT_SFC`,

`Levelist` = 2

Intended MARS usage

- ORACLE/rtdb to be operated as is, ie. With 10 days time window
- ORACLE/rtdb is efficient for the receiving of
 - _ obs
 - _ overseas model data in segments
- Data to be aged off to MARS
- Seamless and unified access to current and historical data
- ORACLE usage under review

McIDAS interface for Regional Forecast Centres

- MARS client imbedded in Mcidas ADDE server
- Modifications to

Configuration files

GRIB to Mcidas file format conversion

GRDDISP MARSA/GASP_AN PAR=T LEV=1000

MARS interface to post-processing package

```
TITLEA = 'Bureau of Meteorology - NMOC GASP T239L33 FORECAST'
TYPEA = 'MARS'
TAPESA = 'operations'
STREAMA = 'GASP'
EXPVERA = 1
BDATEA = 20050108
BTIMEA = 00
OFFSETA = 0.
FIELD1 = 'MSLP','THICK'
SUBPA = 1,5
DERFLD = 'THICK',41,0,3,0,'HT','LEVEL02',
          'HT','LEVEL01','MINUS',10.0,:DIVIDE','.END'
HPOVLY1 = 'MSLP','THICK'
HPCINT = 'MSLP',1000.,4.,'THICK',1000.,4.
HPROJ = 'LC'
ENDOFDATA
```

SamFS interface – for BMRC

- SAM proxy server for gridded model data
- No demand

MARS at BoM – current status
