Stan Posey; sposey@nvidia.com; NVIDIA, Santa Clara, CA, USA

Computing with IBM Power CPU + NVIDIA GPU

Next-Generation IBM
Supercomputers and
Enterprise Servers

Long term roadmap
integration

OpenPOWER Foundation

Open ecosystem built on
Power Architecture

Google

TYAN

& 50+ more...

First GPU-Accelerated POWER-Based Systems Available Oct 2014

IBM Power CPU + Tesla GPU Available 2014

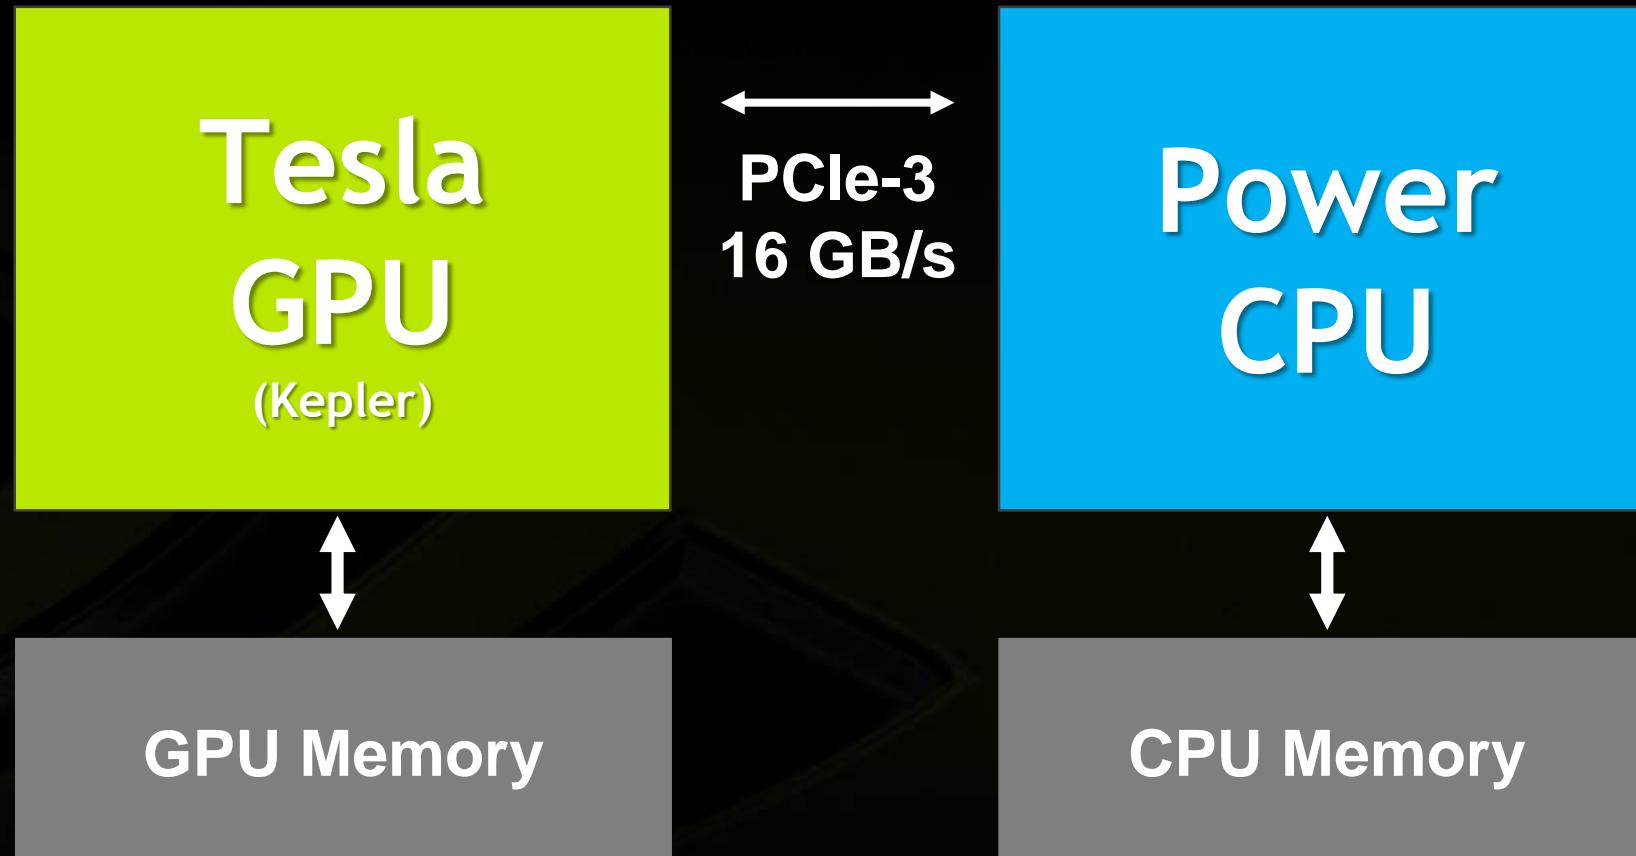

IBM POWER S824L

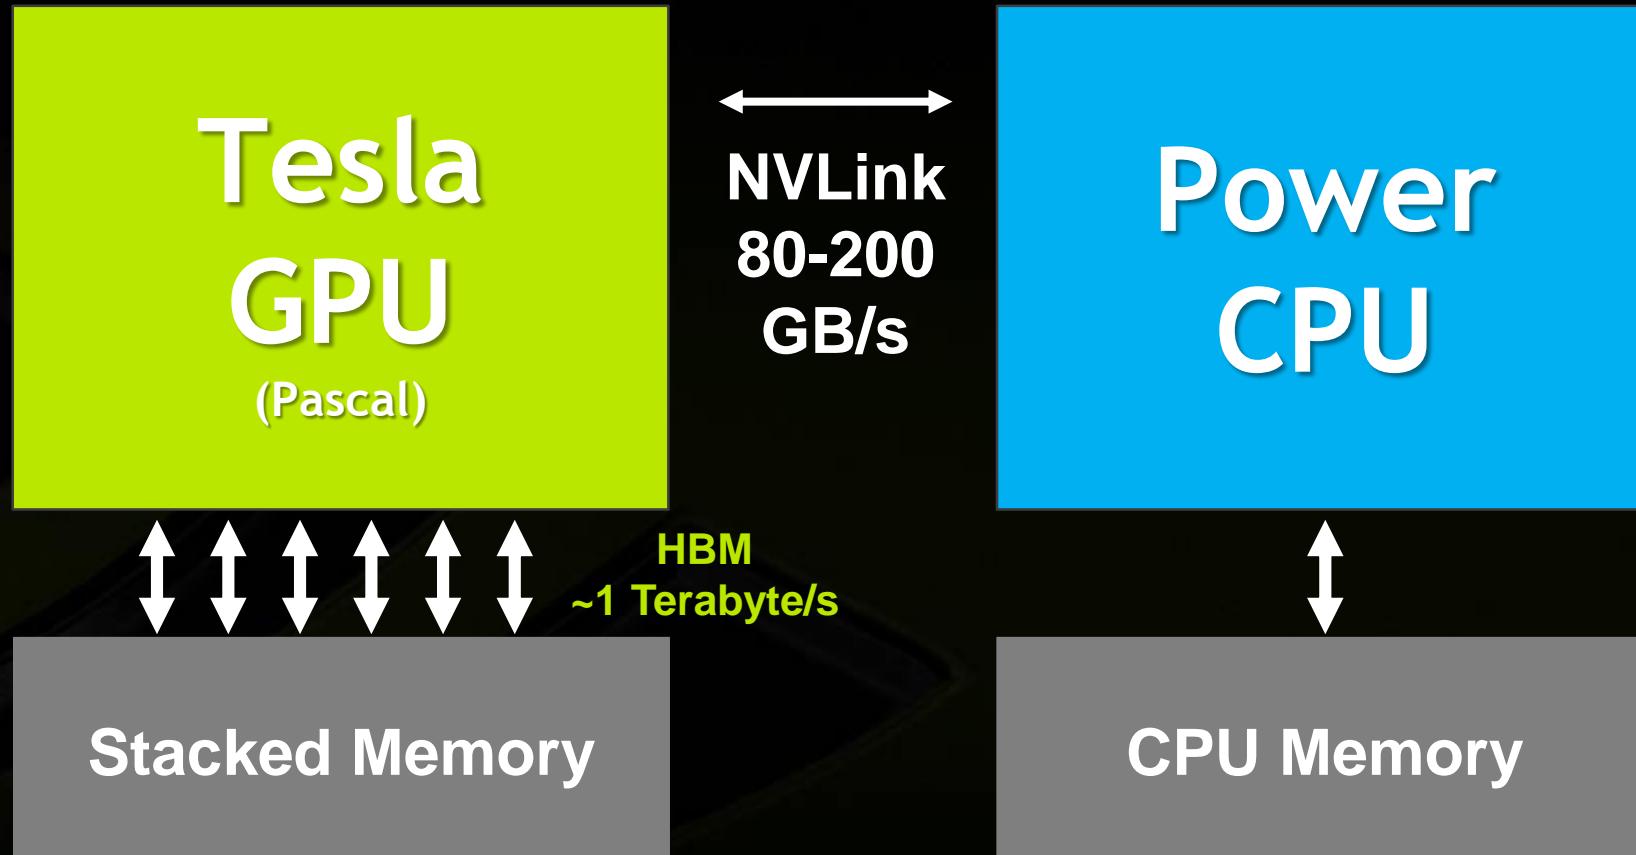

- 2 x POWER8 CPUs
 - 1TB Memory Capacity
 - 384 GB/s Max Mem Bandwidth
- 2 x NVIDIA Tesla K40 GPU Accelerators
- Linux Operating System

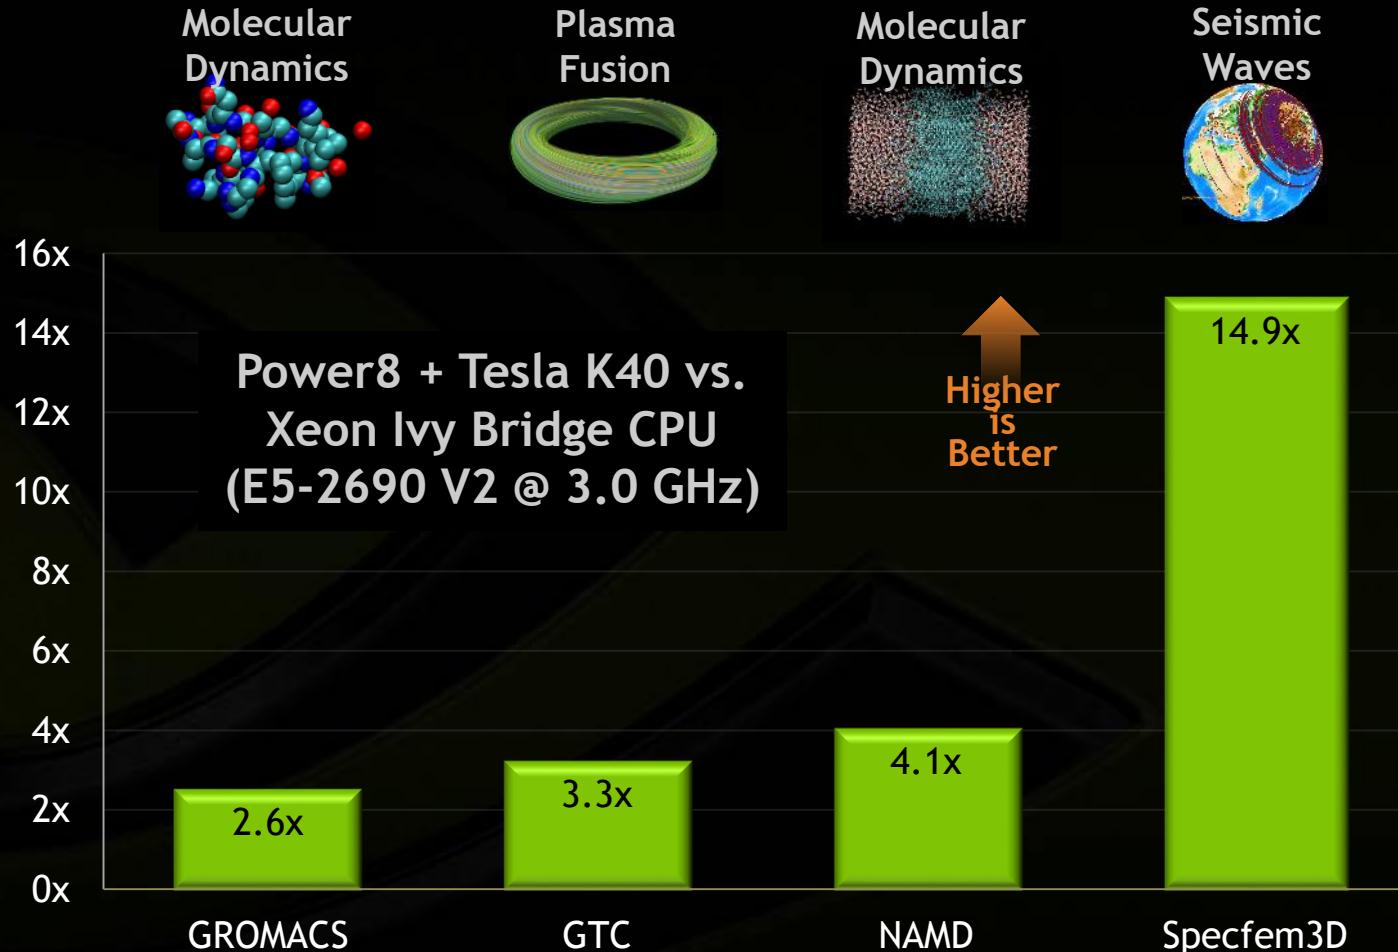

IBM Power CPU + Tesla GPU Available 2014

High Speed Data Interfaces Available 2016

Early Benchmarks: Power8 + Tesla K40 GPUs

Results from NVIDIA
PSG Cluster (HQ, USA)

<http://psgcluster.nvidia.com/trac>

- About 32 compute nodes
- Latest IBM and Intel CPUs
- Latest compilers and tools
- This study: Single CPUs and single Tesla K40 GPU

COSMO Model Operational NWP at Meteo Swiss

Delivering performance in scientific simulations: present and future role of GPUs in supercomputers
 -by Dr. Thomas Schulthess, Director CSCS; NVIDIA GTC, March 2014

COSMO on GPUs from ECMWF Scalability Workshop

Implementation of COSMO on Accelerators

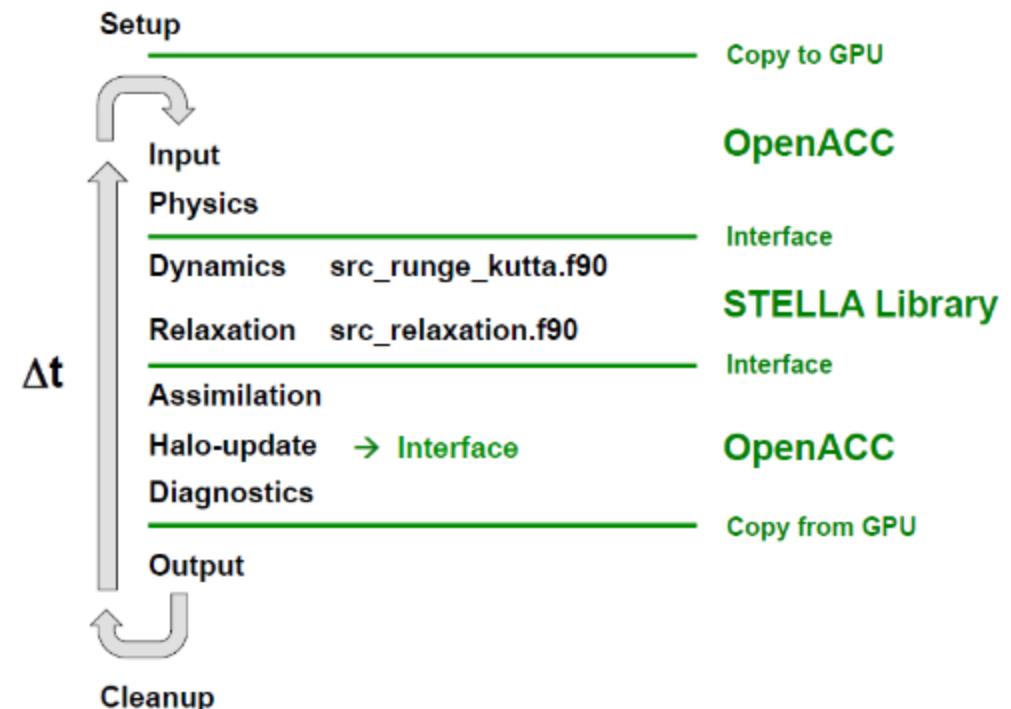

-by Dr. Oliver Fuhrer, MeteoSwiss; ECMWF Scalability Workshop, Apr 2014

Approach

- Dynamics**
 - 40k lines, 60% runtime
 - Few developers
 - Strongly memory bandwidth bound

 - Physics & Assimilation**
 - 130k lines, 25% runtime
 - Several developers
 - “Plug-in” from other models
 - Less memory bandwidth bound
- } Aggressive rewrite
- } Port to GPU

Implementation

COSMO on GPUs from ECMWF Scalability Workshop

Implementation of COSMO on Accelerators

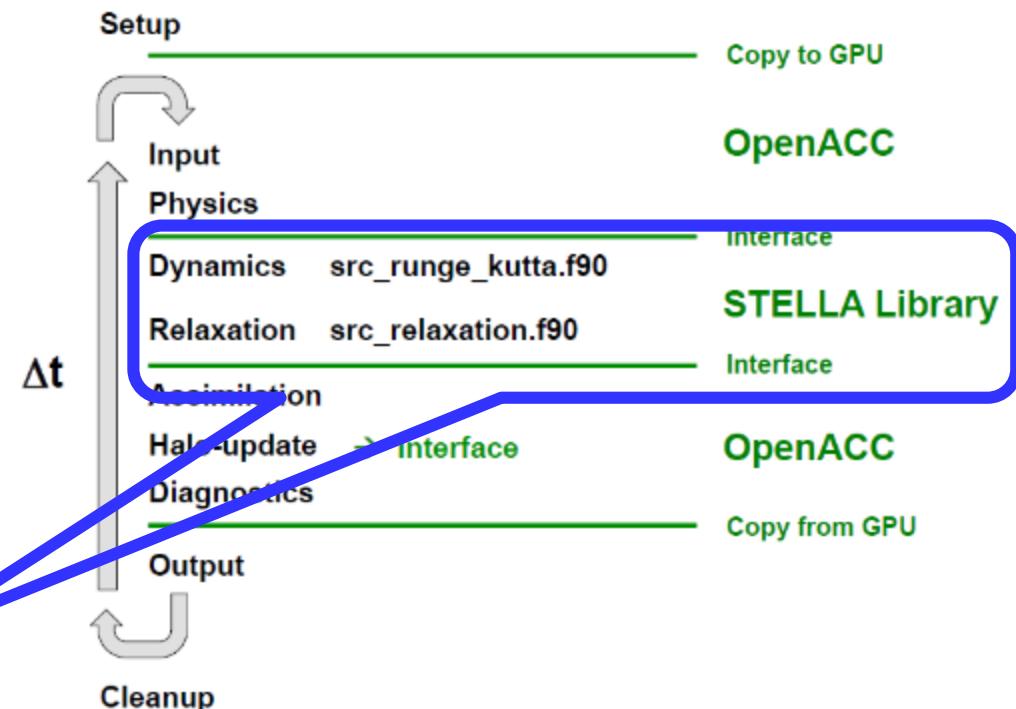

-by Dr. Oliver Fuhrer, MeteoSwiss; ECMWF Scalability Workshop, Apr 2014

Approach

- Dynamics**
 - 40k lines, 60% runtime
 - Few developers
 - Strongly memory bandwidth bound

 - Physics & Assimilation**
 - 130k lines, 25% runtime
 - Several developers
 - “Plug-in” from other models
 - Less memory bandwidth bound
- } Aggressive rewrite
- } Port to GPU

Implementation

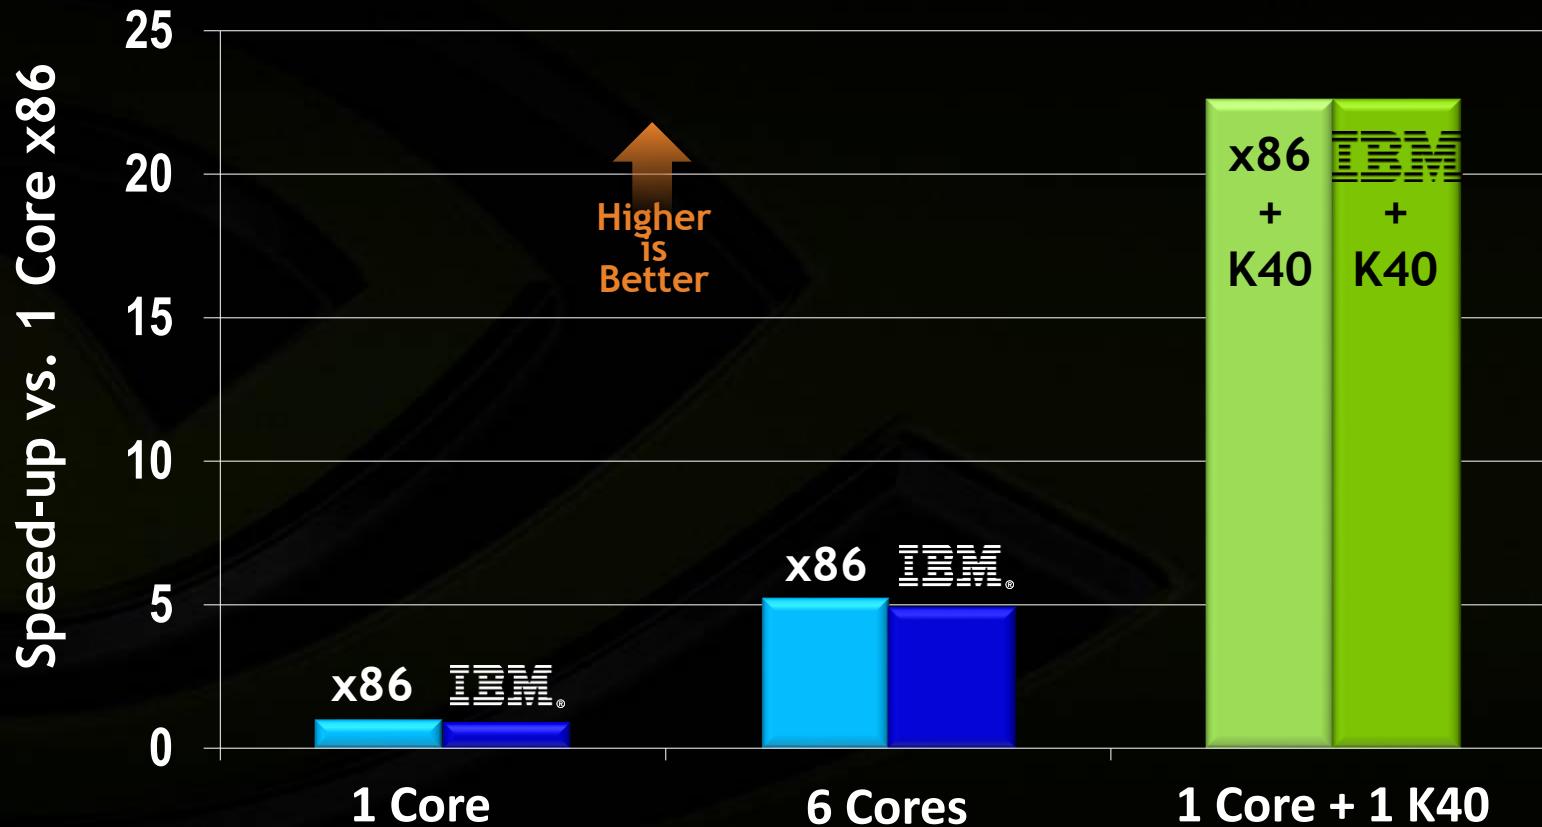

**Dynamics only test
for Power8 + K40**

COSMO Dynamics Results for Power8 + K40

Numerical Results Validation Confirmed by MeteoSwiss

Results from NVIDIA
PSG Cluster (HQ, USA)

<http://psgcluster.nvidia.com/trac>

- COSMO SVN revision 6307
- PerformanceUnittest.Dycore case, 122 x 122 (x60)
- All results single socket
- IBM Power 8:
 - 12 Cores @3.9 GHz
- Power 8 Compiler: gcc 4.9.1
- x86 Xeon E5-2690 v2:
 - 8 Cores @ 3.0 GHz
- X86 Compiler: gcc 4.8.2
- NVIDIA Tesla K40 GPU
- CUDA 5.5

Summary: OpenPOWER and NVIDIA GPUs

- OpenPOWER offers an alternative to x86-based GPU accelerated HPC
 - First GPU accelerated, Power-based systems available during 2014
- IBM and NVIDIA have developed a tightly integrated HPC roadmap
 - New technologies in 2016: Power roadmap, Pascal GPU, NVLink, more
- The COSMO model was successfully demonstrated on Power8 + K40
 - Dynamics test achieved numerical validation and performance expectations

Thank You and Q&A
