

Support for MET is provided by NOAA, US Air Force, NSF and NCAR  
through the Developmental Testbed Center (DTC)

NCAR

Developmental Testbed Center

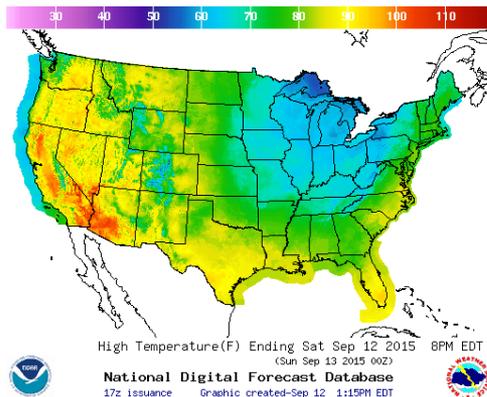

# Unifying Verification through a Python-wrapped Suite of Tools

Tara Jensen, John Halley Gotway, Minna Win-Gildenmeister, Julie Prestopnik, Jim Frimmel, Geoge McCabe, Randy Bullock, Ivanka Stajner and Geoff Manikin

*Workshop on developing Python frameworks for earth system sciences*  
*ECMWF – Reading November 28-29*

# Why Unification

Forecasters

Government Centers

University and National Lab Researchers

Comprehensive and unified verification tool - Make R20 more efficient - Provide a consistent set of metrics

Allows Researchers and Operational Scientists to speak a “common verification” language

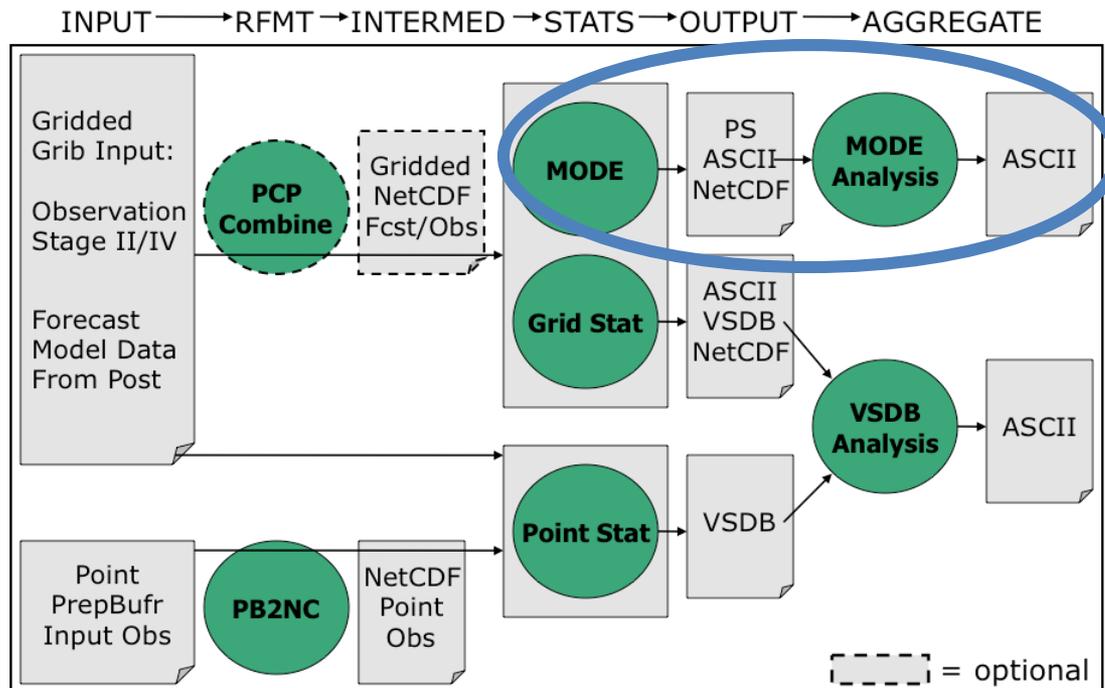

User Support of unified package provides greater opportunity to train all on verification best practices

# A Bit of History - Over a Decade Ago

DTC was asked to replicate the EMC mesoscale verification package (VSDB) in a platform independent and extensible format and provide it to the community

## MET Overview v1.0 (January 2008)

Additional  
tools beyond  
EMC VSDB

# MET Package - Today

- MET is community code supported by DTC that is free to download (registration required)
  - 3400+ registered users
  - 125+ countries, 33% from USA
  - Universities, Government, Private Companies, Non-Profits
- Download MET release and compile locally.
  - Register and download: [www.dtcenter.org/met/users](http://www.dtcenter.org/met/users)
  - C++ with calls to some Fortran libraries, GSL, netCDF4 and HDF5
  - Linux with GNU, Portland Group (PGI), or Intel compilers
- Support
  - Online tutorial and in-person tutorials given yearly
  - [met\\_help@ucar.edu](mailto:met_help@ucar.edu) help desk
  - 250+ support tickets in past year

Not adopted by  
EMC until  
recently  
Code-bases  
diverged

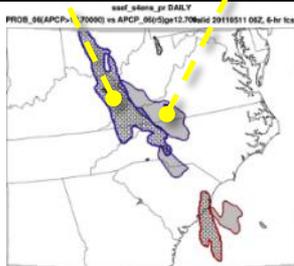

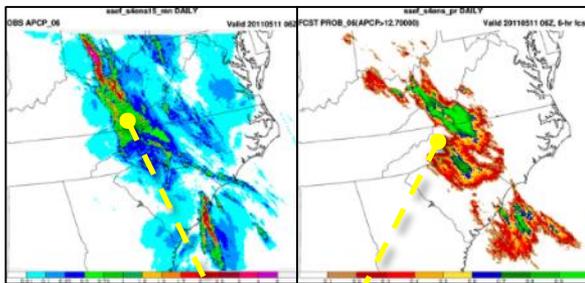

# MET

A verification toolkit designed for flexible yet systematic evaluation  
(supported to the community via the DTC)

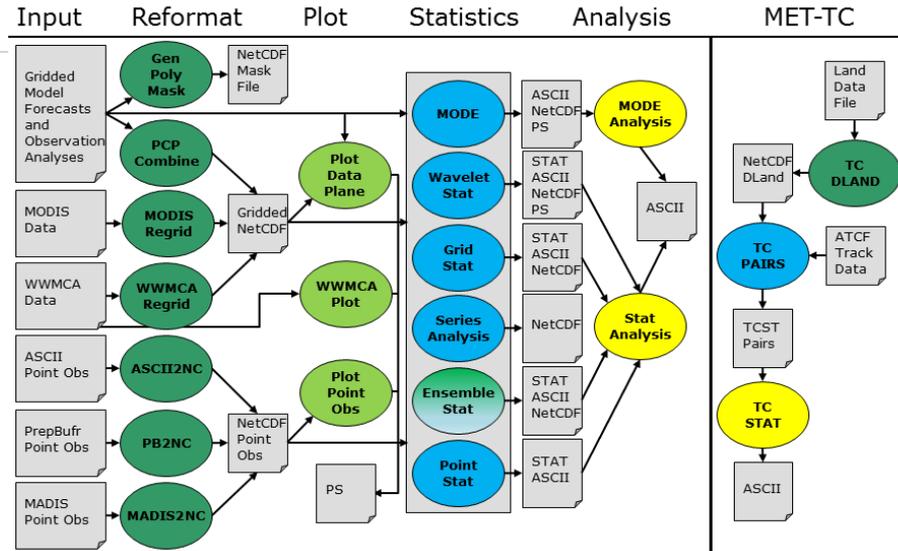

## Model Evaluation Tools

- Over 70 traditional statistics using both point and gridded datasets
- Multiple interpolation methods
- Computation of confidence intervals
- Able to read in GRIB1, GRIB2 and CF-compliant NetCDF
- Applied to many spatial and temporal scales (multi-decadal climate to 15-min storm-scale)
- Regridding within the tools and ability to apply complex masking
- 3400+ users, both US & Int'l

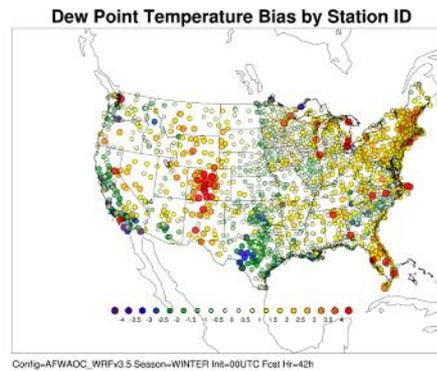

### Object Based and Spatial Methods

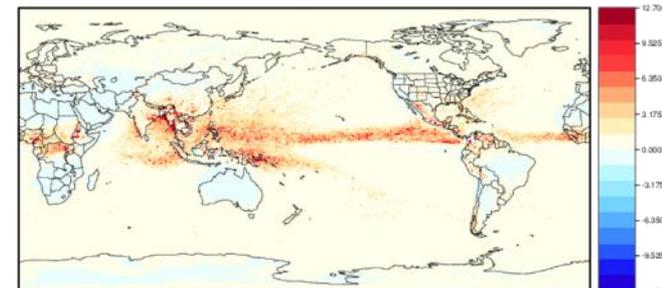

Bad forecast or  
Good forecast  
with displacement  
error?

### Geographical Representation of Errors

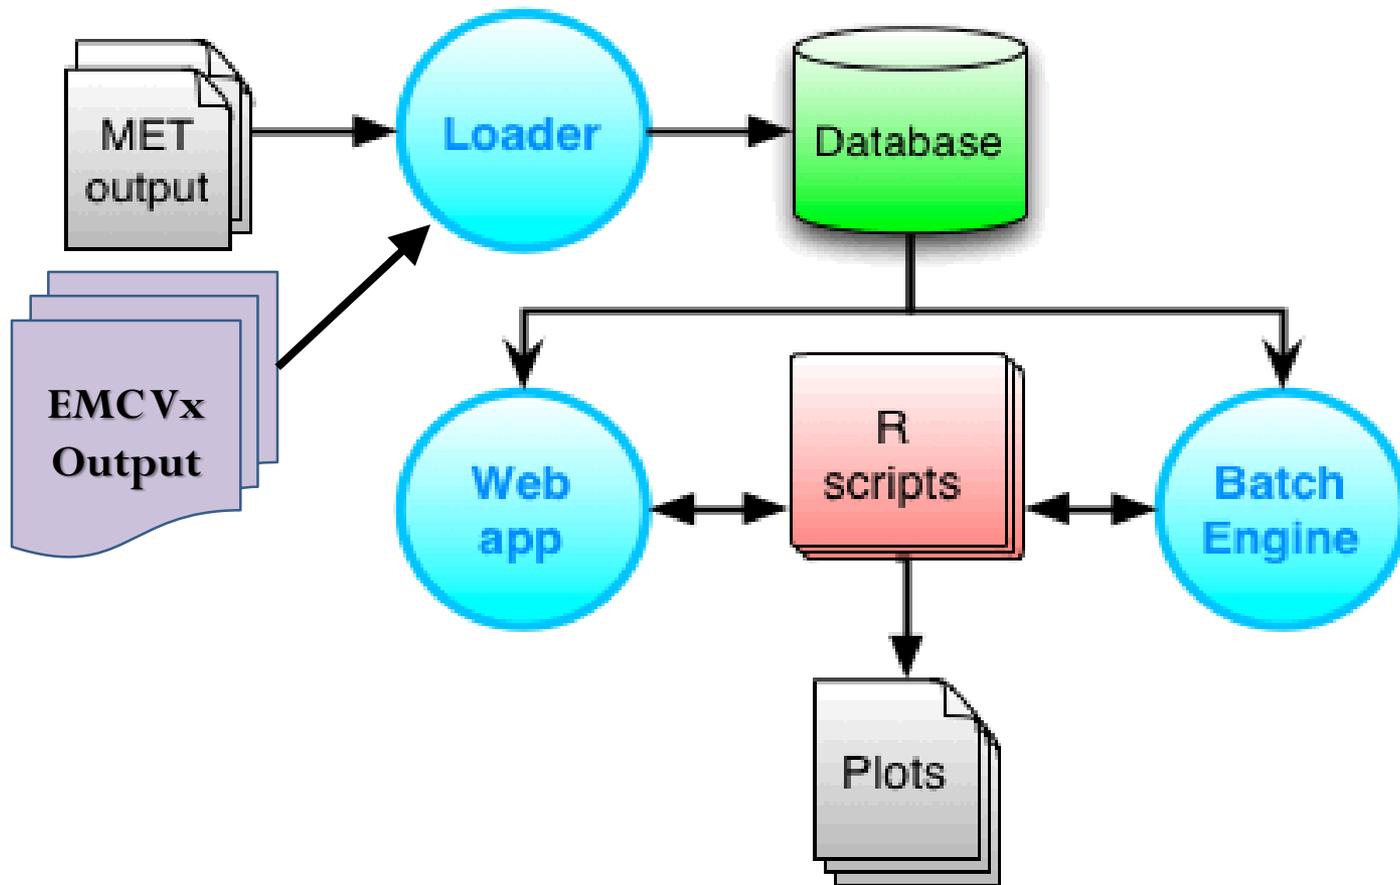

### 90<sup>th</sup> Percentile of difference between two models

# METViewer components

**Packages:** Java, Apache/Tomcat, MySQL, R statistics

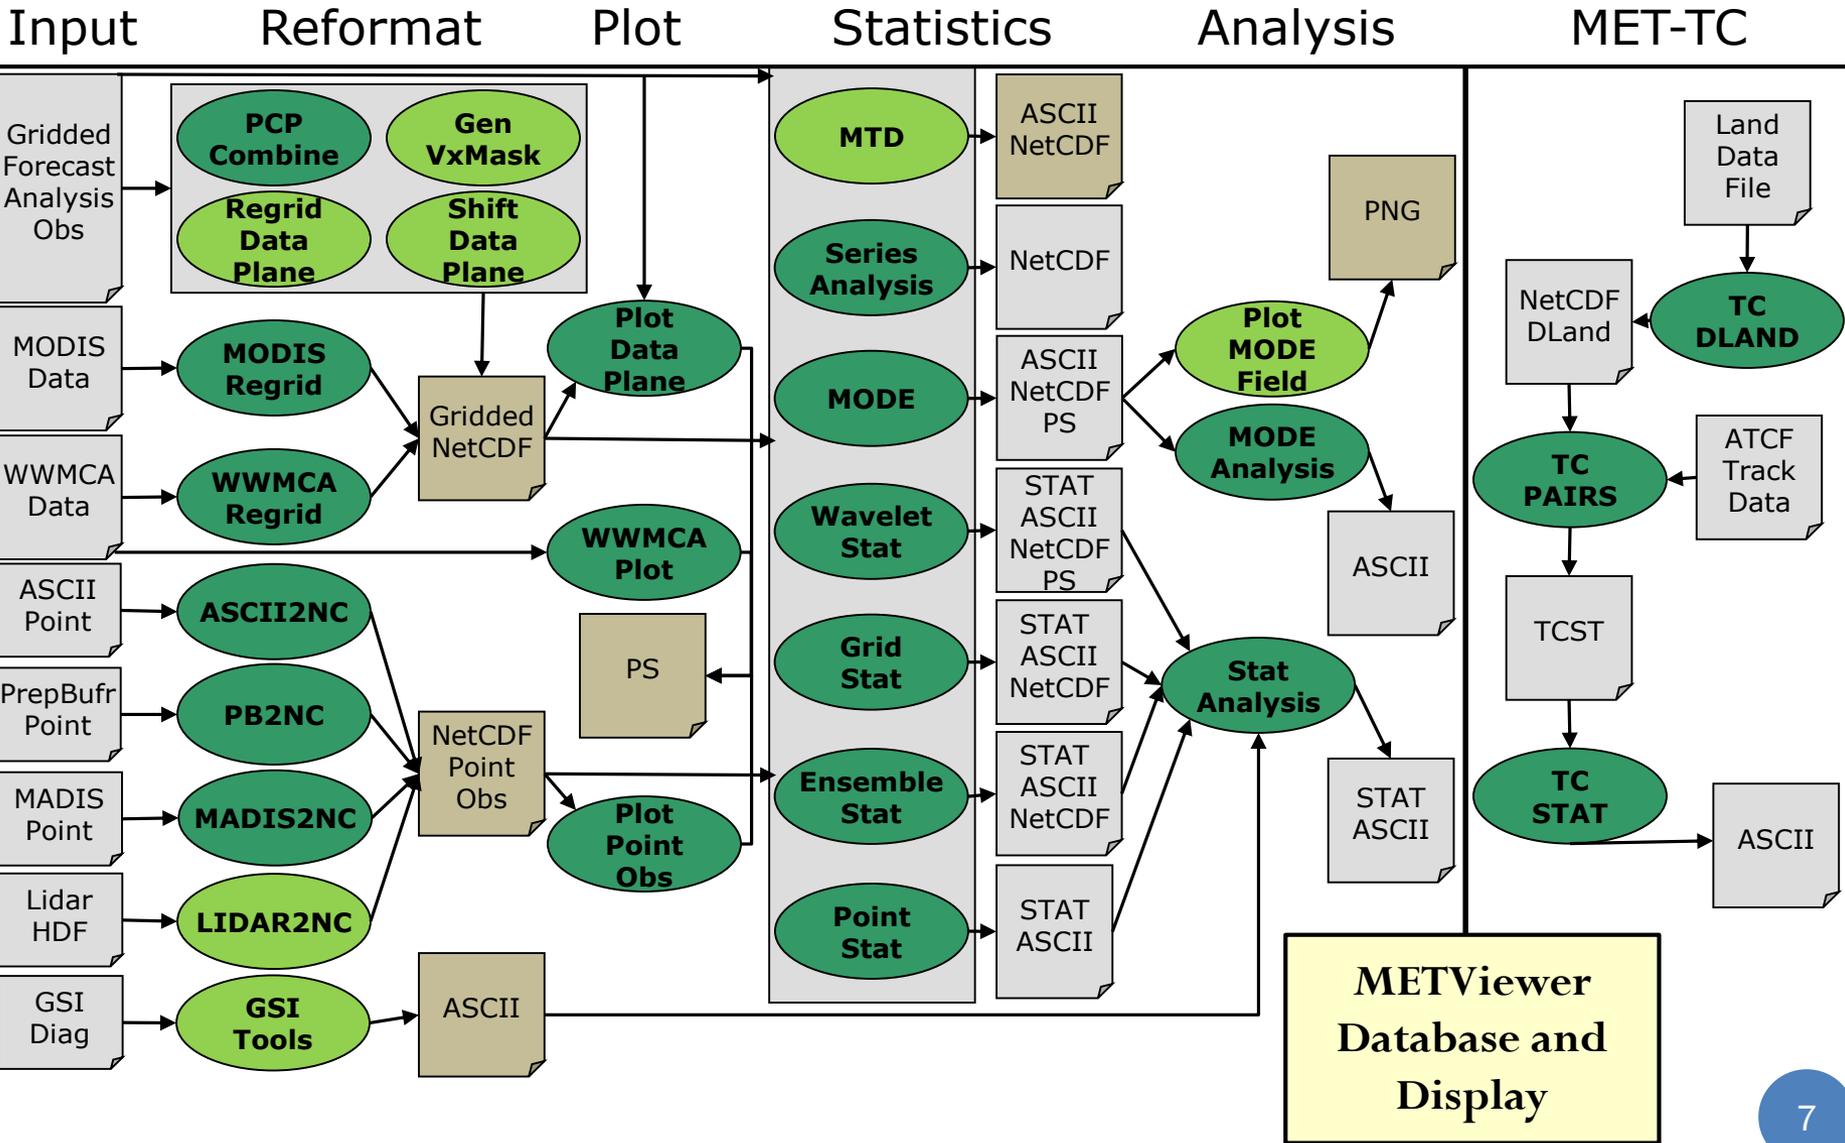

**Database and Display analysis tool**

# MET v6.0 overview

New tool in past 3 years

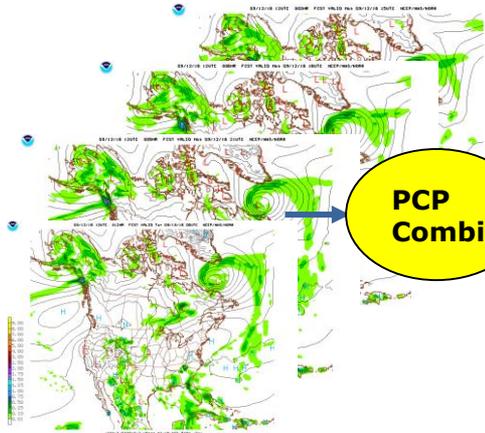

New output in past 3 years

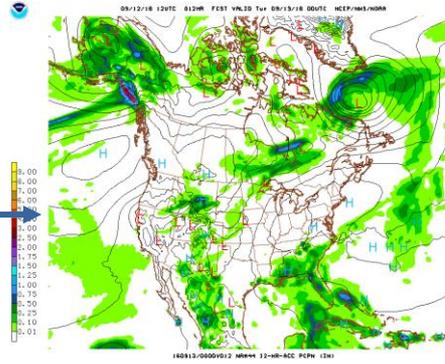

# Example: Accumulated precipitation

3-h accumulation QPE

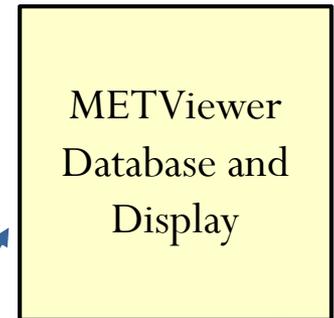

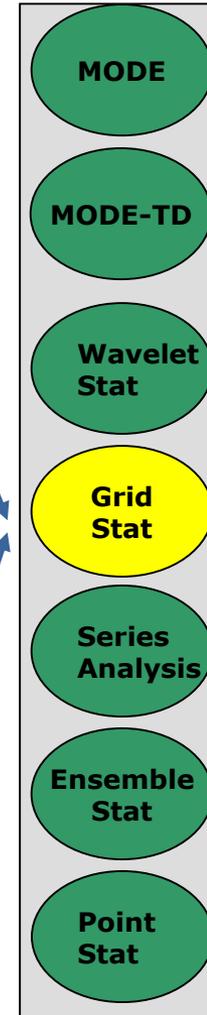

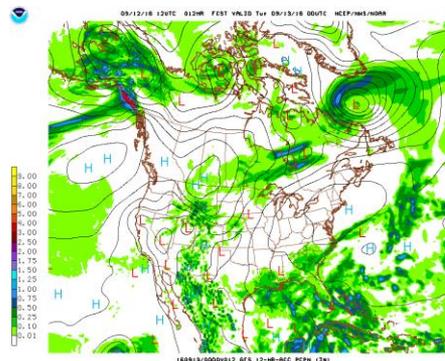

12-h accumulation QPE

**PCP  
Combine**

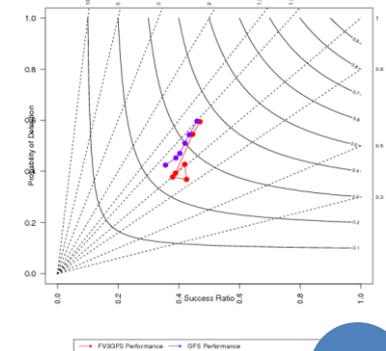

12-h accumulation QPF

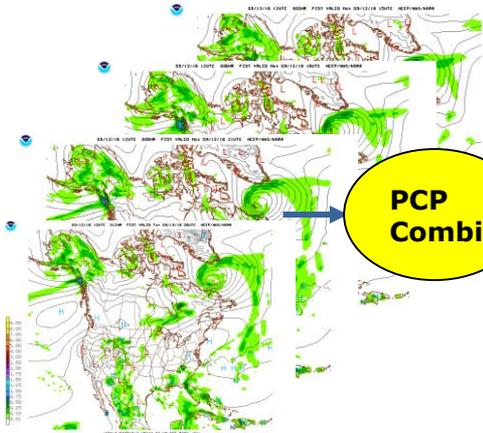

Multiple runs over time

2017/07/15 - 07/29, 24/36/48/60/72/84h fcsts, at 0.25in/day threshold

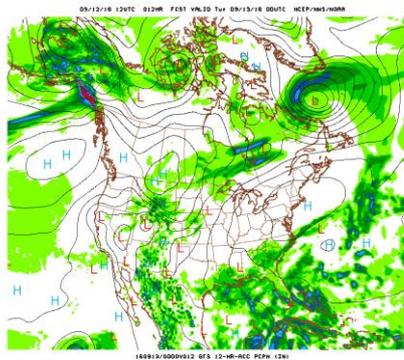

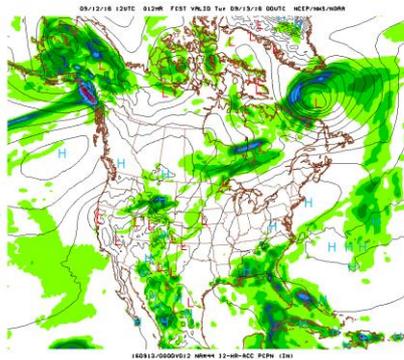

# Example: Accumulated precipitation

3-h accumulation QPE

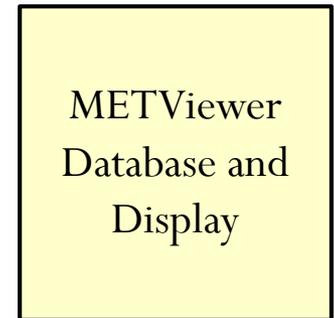

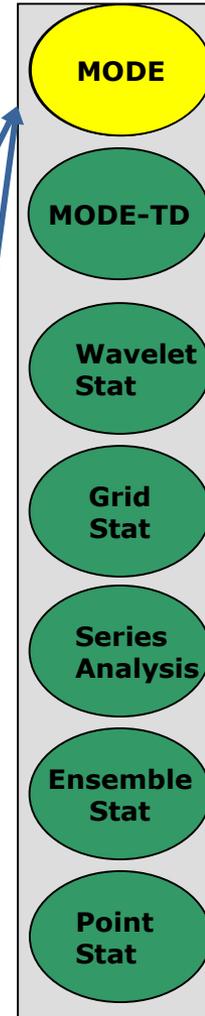

PCP  
Combine

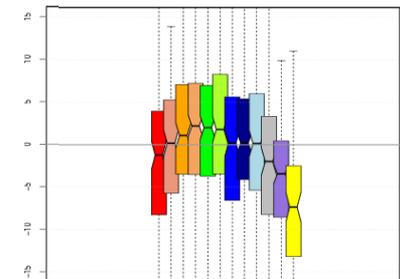

12-h accumulation QPE

12-h accumulation QPF

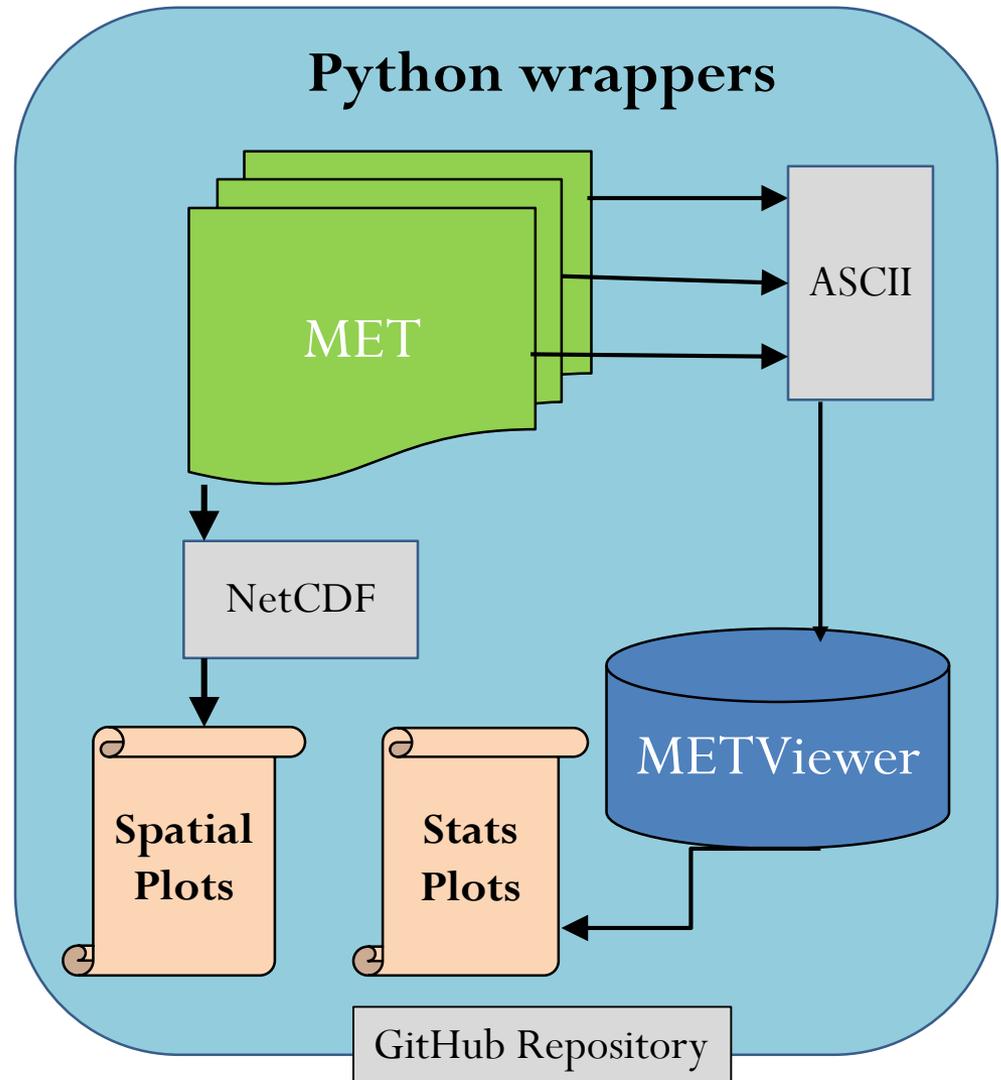

Multiple  
runs over  
time

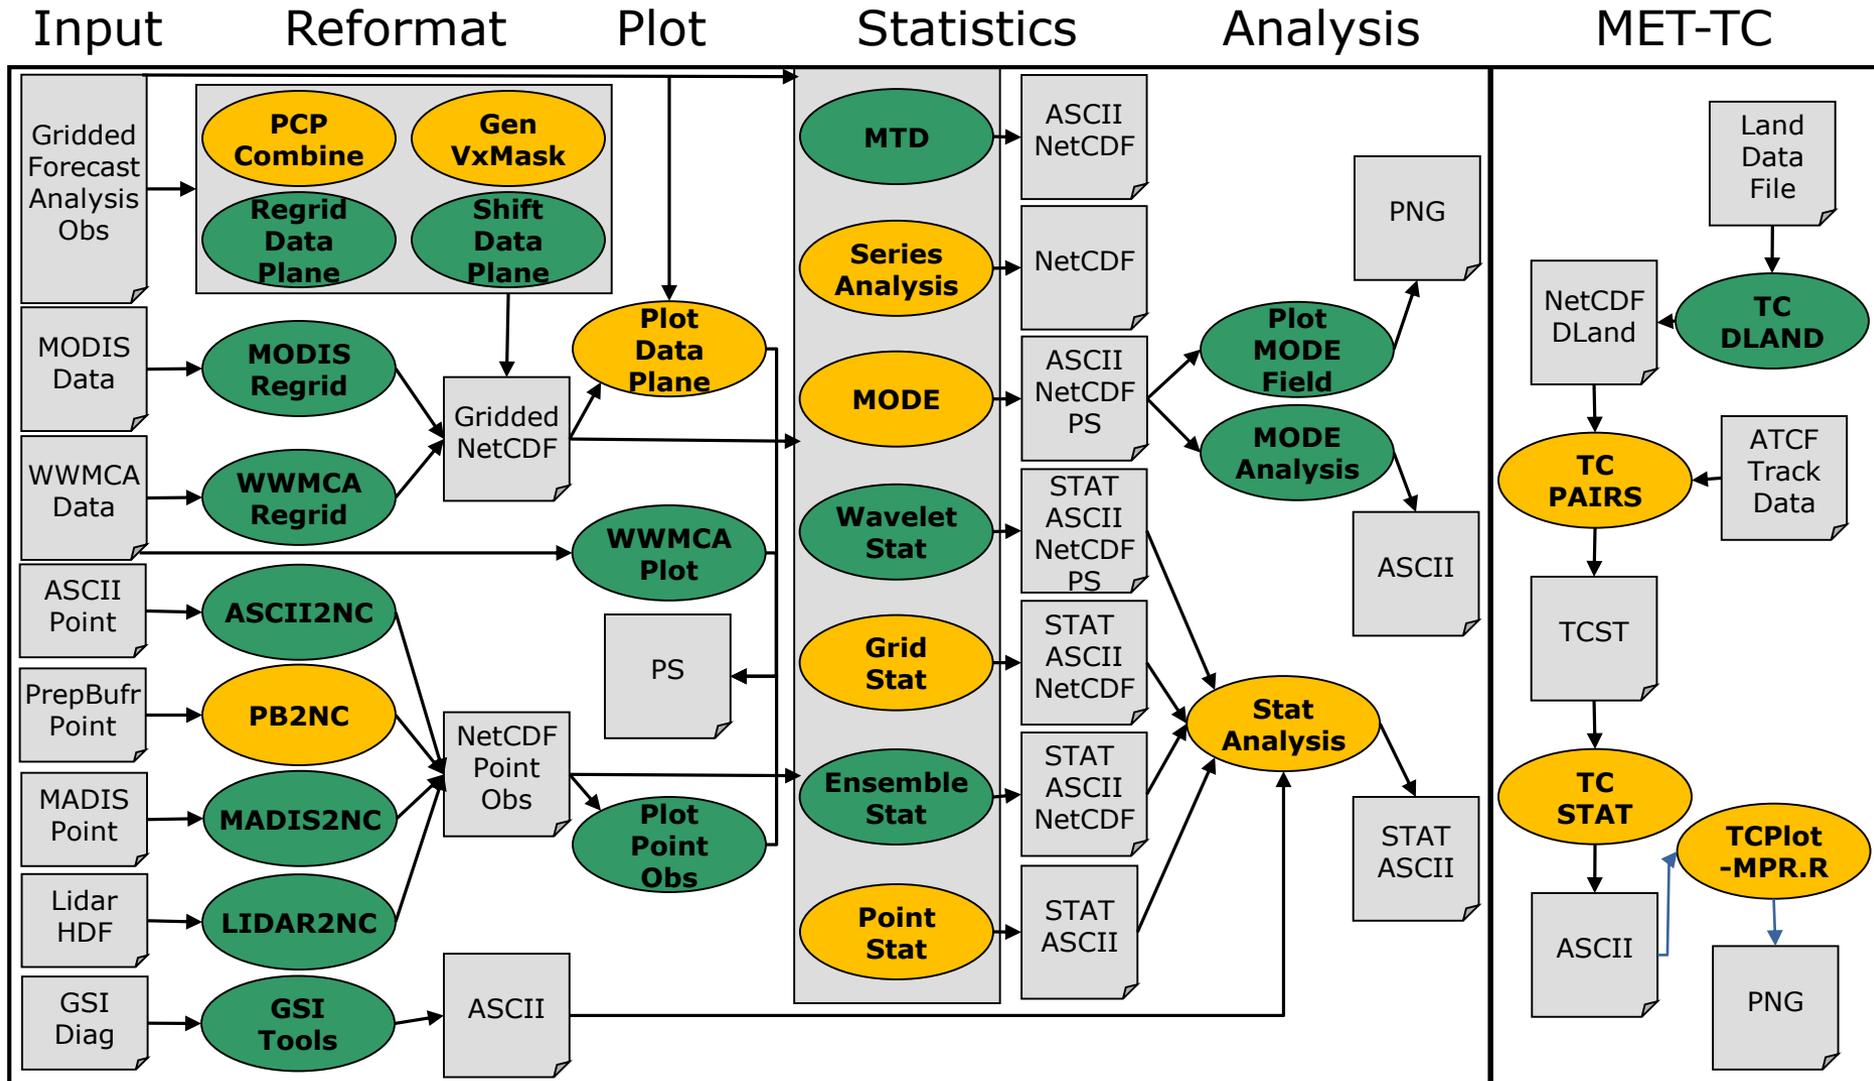

# MET+ Unified Package

- Python wrappers around MET and METViewer:
- Simple to set-up and run
- Automated plotting of 2D fields and statistics
- Communication between MET & python algorithms (Cython)

**Initial system - Global deterministic with plans to generalize across scales when possible to quickly spin-up Ensembles, High Resolution & Complete Earth System Model Components**

## The Pyplot API

Matplotlib Basemap

# MET+ Coding Standards

- NCEP Coding Standards
  - Python section of NCEP standards
  - Based on Google Python Coding standards
  - Language rules
  - version 2016a found on NCAR/METplus GitHub wiki:  
<https://github.com/NCAR/METplus>

# MET+ Coding Style

pep8 (Python Enhancement Proposal)

- code consistency and readability
- code layout: whitespace, line length, etc.
- naming conventions for variables, classes, methods and functions

<https://www.python.org/dev/peps/pep-0008>

# MET+ Documentation

- Doxygen
  - documentation generator
  - written in the source code
  - easy to keep up-to-date
  - documentation can be readily viewed (html documentation generated)
- Python docstrings for information about functions, methods
  - `help(python object)`
  - readily generated from Python REPL (language shell)
  - REPL = read, evaluate, print, loop

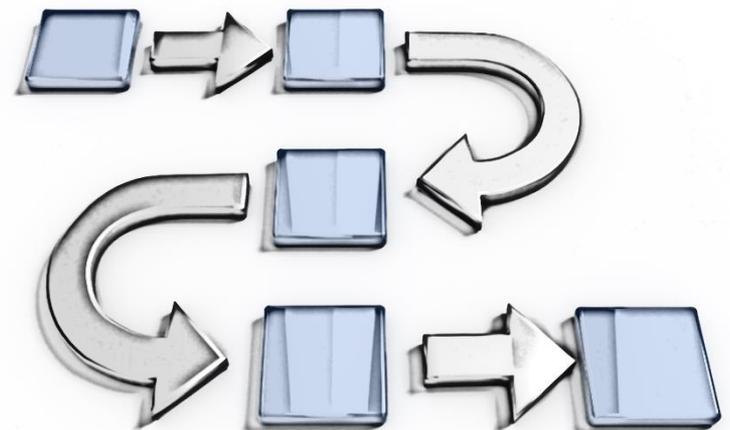

# MET+ Best Practices

- Run pep8 tool or similar application to verify pep8 conformance
- Run pylint or other code linters to ensure code readability and to identify unused variables, imports, etc.
- Run relevant tests written in Python unittest
- Use GitHub for code management including issue tracking and wiki

# Aligning with NCEP Workflow

- Discussing and planning to collaborate on new dynamical core (FV3) workflow developers.
- Using PRODUTIL package for logging and constants file parsin plus likely other features
- Plan to use Rocoto workflow management (NOAA tool) for dev environments and make autonomous to also use with ecFlow or Cylc for operations

# MET+ Beta - Prerequisites

- Python 2.7 *\*\*When we started this was specified by NCO*
  - R version 3.25 *\*\* Only if you are using PlotTCMpr.R tool*
  - nco (netCDF operators)
  - MET version 6.0 or later installed  
*\*\* Tool is designed to sit on-top of MET and should be version insensitive after METv6.0*
  - Basic familiarity with MET
  
  - **User:** Access the public release at: <https://github.com/NCAR/METplus/releases>
- OR-
- Use install on Theia or WCOSS  
*\*\* Only on Gyre right now, will populate on Surge, Tide and Luna as access is available*
  - **Developer:** Need a github account <https://github.com/NCAR/METPlus/>  
then proceed like a User

# Operational Directory Structure

- doc/ - Doxygen documentation
- internal\_tests/ - developer tests
- parm/ - where configs live
- README.md - general README
- src/ - executables
- ush/ - python scripts

# Suggestions on how to set up parm dir

- **Met\_config**
  - All MET configuration files with Environment Variables should reside here
- **Metplus\_config**
  - Common install for COMMUNITY INSTALLATION – includes paths to commonly used data
- **Use\_cases**
  - Common install for FUNCTIONAL GROUP – includes paths for tests your conducting
- **{user}\_system.conf.{system\_name}**
  - Place your variances from use-cases in here, including pointing to your output directory, or pointing to a different config you are trying, etc...

# 3 Use Cases

- Cyclone Track and Intensity
  - Using MET-TC to pair up ATCF track files
  - PlotTCMPR.R to compute track and intensity errors and plot
- Feature Relative
  - Use MET to match up lat/lon pairs of forecast and analysis feature (e.g. TC, Extratropical cyclone, snowbands, MCS, jet streak, etc...)
  - Extract user specified tiles from Forecast and Analysis files for computation of systematic errors
  - Use Series-Analysis to compute statistics for the stack of tiles over region of interest (e.g. Eastern US, UK, Central Europe, Middle East, Tropics)
  - Use Plot-Data-Plane to generate quick look plots
- QPF
  - Use Pcp-Combine to accumulate 1-hr QPE into 3-hr accumulation
  - Use Grid-Stat to compute Categorical statistics (e.g. Prob of Detection, False Alarm Ratio) for multiple thresholds

# Next Major Development: Communication between MET and Python

Anticipated Solution: Cython - C extensions for python

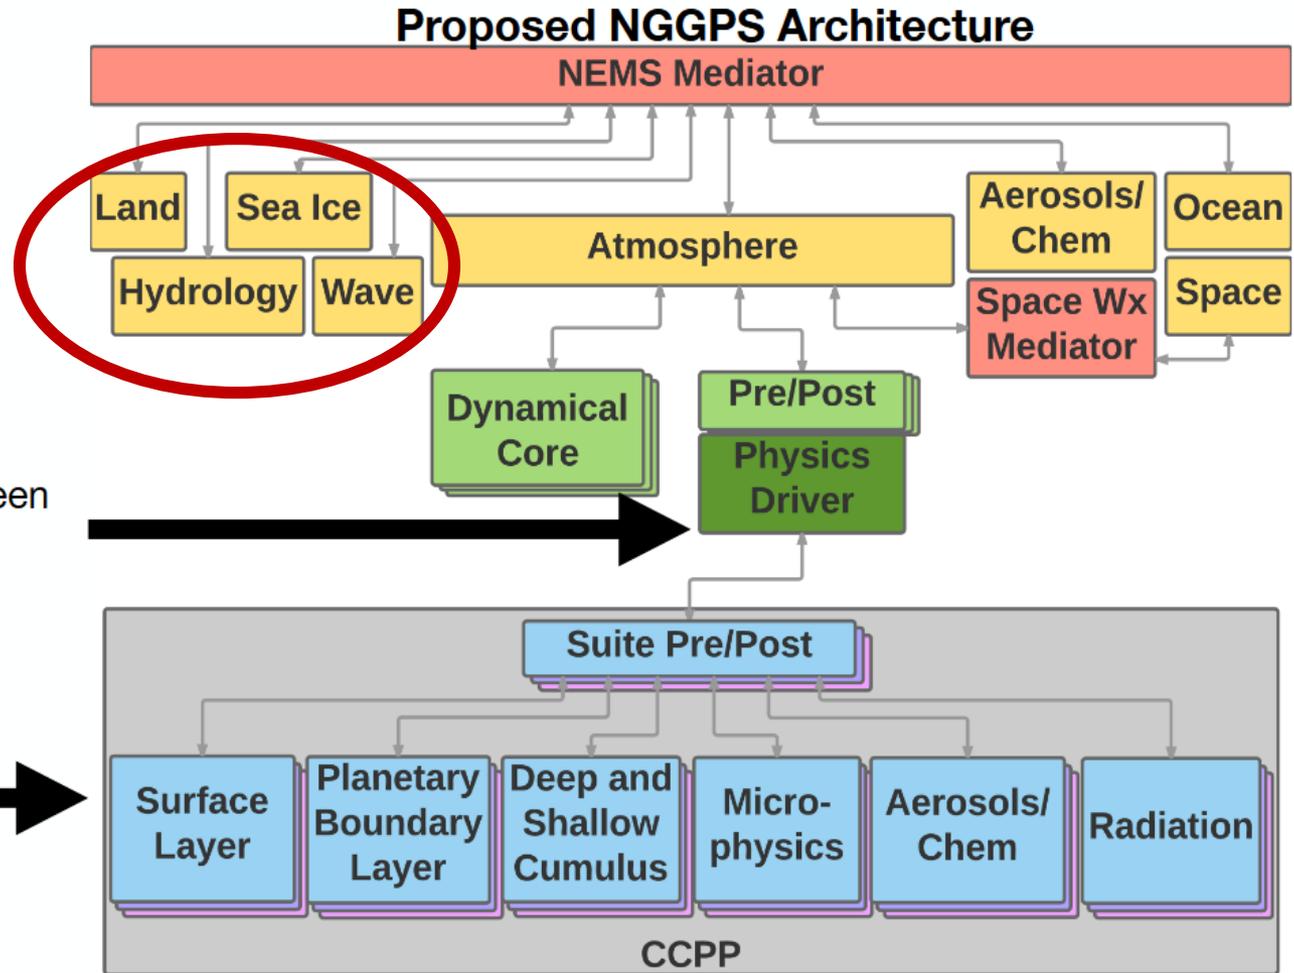

- Write Python code that [calls back and forth](#) from and to C or C++ code natively at any point.
- Easily tune readable Python code into plain C performance by [adding static type declarations](#).
- Use [combined source code level debugging](#) to find bugs in your Python, Cython and C code.
- Integrate natively with existing code and data from legacy, low-level or high-performance libraries and applications.

*Excerpted from: <http://cython.org/>*

# Next... Adding Additional Capability

Already have pre-existing packages which we will link in

**IPD:** Common interface between multiple dycores and physics suites

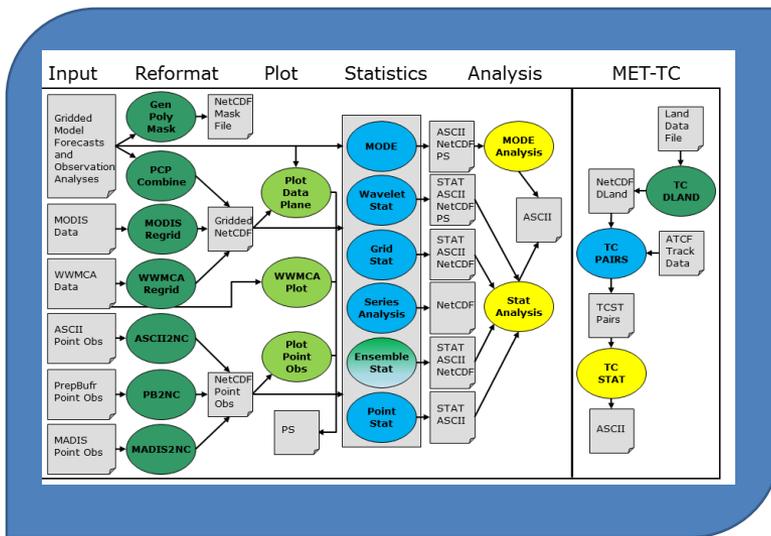

**CCPP:** Limited collection of physics suites that interface with the IPD

Next year will be adding more process-oriented diagnostics to aid in CCPP development

# Docker MET and METViewer

## Docker (Amazon Web Services):

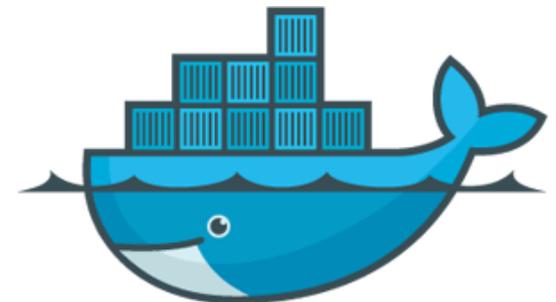

- Open-source technology to build and deploy applications inside software containers
- Packages software containing: code, runtime, system tools, system libraries, etc
- Enables you to quickly, reliably, and consistently deploy applications

MET and METViewer compiled in a Docker Container

- 1) Set up to work with a suite of test-cases for NWP innovation testing (MMET/MERIT)
- 2) Bundled with MET online tutorial data

[http://www.dtcenter.org/met/users/downloads/docker\\_container.php](http://www.dtcenter.org/met/users/downloads/docker_container.php)

docker

# Thank You

## Where to find MET+ and get help

The screenshot shows the MET Users Page on the DTC (Developmental Testbed Center) website. The page is titled "MET USERS PAGE" and is organized into several sections:

- Navigation:** Home, Terms of Use, Overview, Download, Documentation, User Support, Related Links.
- MODEL EVALUATION TOOLS:**
  - Welcome:** Welcome to the users page for the Model Evaluation Tools (MET) verification package. MET was developed by the National Center for Atmospheric Research (NCAR) Developmental Testbed Center (DTC) through the generous support of the U.S. Air Force Weather Agency (AFWA) and the National Oceanic and Atmospheric Administration (NOAA).
  - Description:** MET is designed to be a highly-configurable, state-of-the-art suite of verification tools. It was developed using output from the Weather Research and Forecasting (WRF) modeling system but may be applied to the output of other modeling systems as well.
  - Additional text:** MET provides a variety of verification techniques, including:
- EVENTS:**
  - AMS 2018 NWP using Docker Containers (01.06.2018 to 01.06.2018, Location: AMS Annual Meeting in Austin, TX)
  - 2018 Hurricane WRF Tutorial (01.23.2018 to 01.25.2018, Location: College Park, MD)
- ANNOUNCEMENTS:**
  - Release v3.9a of the HWRF system (10.16.2017)
  - MET Version 6.0 Release (04.03.2017)

- GitHub Instructions at Release link
